REPORTING SIGNIFICANT TRENDS AFFECTING EDUCATION PROGRESS IN THE SREB STATES

New Highs Reached in College Courses Taken Through E-Learning*

Percentage of Undergraduate Credit-Hours Through E-Learning, Participating SREB States, 2009-10

*Some form of e-learning is involved in virtually every college course. The SREB-State Data Exchange and the SREB *Electronic Campus* require more than 50 percent of the course content to be delivered electronically to be included in these e-learning counts.

Note: Some bars are missing because some states do not have every type of institution or currently do not participate in this survey section. See the table on the other side for details.

* Instruction is considered e-learning if more than 50 percent of course content is delivered electronically. Three sub-categories are included: Web; site-to-site, 2-way and audio/video (compressed video); and other, including satellite, cable TV, broadcast TV/radio, closed-circuit, videotape and CD-ROMs.

"NA" indicates not applicable. There was no institution of this type in the state.

"—" indicates not reported or incomplete.

Note: No average for the SREB region is shown because not all states yet participate in this survey section. Figures for each of the six types of four-year colleges and universities, four types of two-year colleges, and three types of technical institutes or colleges are available in the online database for this table.

¹ The university system in Florida used a 75 percent rule until 2008-09, when it went to an 80 percent rule. Florida and Mississippi Community Colleges use a 75 percent criterion to define e-learning, so figures reported here may be lower than they would be if they used the 50 percent criterion.

² Includes the University of Maryland University College.

³ West Virginia used an 80 percent criterion to define e-learning until 2005-06, so figures for the earlier year may be lower than they would be if it used the 50 percent criterion.
