

SREB Ready

Many schools need to use the senior year to close the readiness gap and prepare students who aren't math-ready for college. SREB's Math Ready course is designed to address this specific need.

Ready for College: *Math Ready*

This course emphasizes an understanding of math concepts, as opposed to memorizing facts. Math Ready students learn the context behind procedures and come to understand the “whys” of using certain formulas or methods to solve a problem. By engaging students in real-world applications, this course develops critical-thinking skills that students will use in college and careers.

Unit 1: Algebraic Expressions

This unit focuses on strengthening students' understanding of basic numerical operations and manipulations, including multiple representations of equivalent expressions. The unit contains a unique approach that students will find entertaining while facilitating mathematical growth.

Unit 2: Equations

The equations unit takes a nontraditional, active-learning-based approach to reviewing fundamentals of solving one-, two- and multi-step equations. Topics include linear equations, linear equations that include absolute values and linear inequalities.

Unit 3: Measurement and Proportional Reasoning

This unit deals with conversions, using proportions for scaling and area and volume. It requires students to show higher-order thinking and number sense, which helps them make connections with math and science or other subjects in an applied setting.

Unit 4: Linear Functions

This unit takes an in-depth study of linear functions. Students graph and write equations and interpret their meaning in context of the slope and y-intercept. It concludes with students collecting data and writing a line of best fit.

Unit 5: Systems of Linear Equations

The unit is about solving systems of linear equations. Students classify solutions as well as set up and solve problems using systems of equations. Students choose the best way to solve a system of equations and explain their solutions.

Unit 6: Quadratic Functions

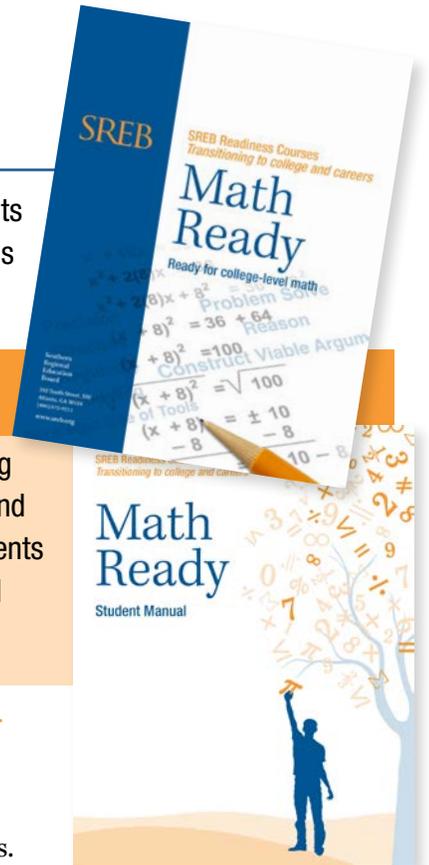

This unit is an expansive look at quadratic functions: their graphs, tables and algebraic functions. It stresses multiple approaches to graphing, solving and understanding quadratics as students explore, make conjectures and draw conclusions in group-work settings.

Unit 7: Exponential Functions

Students gain fluency in exponential functions through varying real-life financial applications/inquiries. The unit builds understanding of these higher-level functions and lets students reflect upon the ramifications of their future financial choices.

Unit 8: Statistics

This unit brings an active-learning approach to probability and statistics. The primary emphasis is on linear regression and fitting equations to data. Simple probability topics support the understanding of regression, and some attention is given to normal distributions.

Improve student outcomes in your school or district.
