COUNCIL ON COLLEGIATE EDUCATION FOR NURSING

Preparing Graduates to Meet the Needs of Diverse Populations

Recent national mandates require health professions education to take innovative approaches to ensure that health practitioners will be culturally sensitive in the 21st century. For example, the Pew Health Professions Commission (1995) stated that “cultural sensitivity must be a part of the educational experiences that touches the life of every student.” The Institute of Medicine includes “an understanding of the cultural, nutritional and belief systems of patients and communities” in its definition of “optimal primary care.” The National

Advisory Council on Nursing Education and Practice (Division of Nursing, U.S. Department of Health and Human Services) has a policy that federal government resources be used to “enhance the ability of the registered nurse work force to meet the challenges of cultural diversity in delivery of health care.” In 1997, an ad hoc committee of the SREB Council on Collegiate Education for Nursing conducted a survey to find out how nurse educators in the South are addressing these mandates.

Method

Cennette Jackson, Ed.D. (Georgia State University), developed the questionnaire for a regional survey about curricular strategies and infrastructures to prepare culturally sensitive nurses. The 20-item questionnaire asked nurse educators to describe how they included cultural content in the nursing curriculum, their perceptions of the cultural makeup of the nursing program, and faculty involvement with other cultures outside the academic setting. The deans or directors of nursing education at 192 institu-

tions received 10 forms to distribute among the nurse educators. The response rate was 29 percent. Staff received and coded forms from 561 faculty members who represented 135 institutions in the 15 SREB states (Delaware became the 16th SREB state in 1998) and the District of Columbia (Table 1). Jackson and Ora L. Strickland, Ph.D., FAAN (Emory University), helped to analyze the data. Strickland also analyzed the philosophy and mission statements that were attached to 73 returns.

Findings

Highlights of the analysis:

- Most respondents said that cultural content is integrated throughout the curriculum (Table 2).
- Thirteen cultural concepts appeared on the questionnaire; of these, the top five were culture, cultural beliefs, cultural values, ethnicity and stereotypes (Table 3).
- The respondents reported various approaches — including “no particular framework at this time” and “eclectic framework” — to selecting, organizing and teaching cultural content. Collectively, they named 21 models — nursing-specific and culture-specific — that provide the theoretical bases for the organization of cultural content in the nursing curriculum (Table 4). Yet, some comments suggest that the content is determined by the course: For example, cultural content may be concentrated in a few specific courses, may be taught regarding a specific subject (such as childbearing) or may be covered in the basic nursing textbook.
- Direct care to patients and class lectures and discussion were the two strategies used most frequently to incorporate cultural content into the learning experiences for students (Table 5).
- The mean ratings reflect strong agreement that “cultural content should be integrated throughout the curriculum” and should be a “thread that ties the curriculum together.” Respondents showed strong support for the suggestion that “separate courses should be available for interested students” (Table 6).
- While sociology and psychology courses were required prerequisites for nursing, less than 20 percent of the respondents reported anthropology or cultural anthropology as prerequisites (Table 7).
- The responses regarding the cultural environment of the nursing programs provided evidence of community-building in all facets of the program, including marketing and recruiting efforts and relations among faculty, students and staff (Table 8). While nearly half of the respondents believed the nursing programs were “somewhat proactive” at promoting diversity, less than 25 percent described their programs as “proactive,” celebrating diversity.
- Few programs had external funding to develop or revise the curriculum (Table 9).
- Students participate with faculty in research related to diverse ethnic groups. These activities include community assessments, cultural assessments, dissertations and special projects. Topics covered include teenage pregnancy, hypertension, racial disparity in transplant results, nutrition and food preferences.
- After reviewing the 73 philosophy statements submitted by programs, Strickland identified six general topics: beliefs about society, humanity, health/health care, nursing, the learner and the learning process in nursing education. Strickland specified three hierarchical categories for each theme. Each program could receive a rating from 1 to 3 on each of the six themes. While a rating of 1 represented a low focus on cultural concepts, a rating of 3 showed a high rating on cultur-

al concepts related to a specific theme. Strickland calculated a total score, ranging from 6 to 18, for each program. Generally, most programs included references to culture or cultural diversity in their philosophy statements (Table 10).

The demographic characteristics of the respondents reflect the diversity of the faculty who are charged with increasing students' awareness of their cultural backgrounds and those of people served.

- Of the 561 nurse educators, 203 faculty taught in associate's degree programs and 357 at the baccalaureate and higher levels (Table 11). One nurse educator did not identify the program type.
- Most respondents were employed full time in state-supported institutions (Tables 12 and 13).
- Most respondents had been employed for six to 15 years (Table 14).
- Most respondents were non-Hispanic white (Table 15).
- Most were assistant professors and held master's degrees (Tables 16 and 17).
- Few respondents completed graduate education in anthropology, ethnic and cultural studies, transcultural nursing or women's studies (Table 18).

- The respondents participate in community activities with populations of a different culture (Table 19). They used a broad definition of culture in specifying some of the activities with specific ethnic or cultural groups (American Indian, African-American, Asian, Hispanic) and other groups (Catholic, Jewish, female, gay, lesbian, migrant, rural, urban, Appalachian, poor, homeless, battered, deaf, elderly).
- Few respondents are members of regional, national or international organizations that focus on cultural concepts and practices (Table 19). The 52 respondents said they participated in the following organizations: the American Public Health Association, American Anthropological Association, International Congress on Women's Issues, Transcultural Nursing Society, National Association of Hispanic Nurses, National Association of Black Nurses, National Association of Catholic Nurses, National Association of African American and Latino Studies, Filipino Nurses Association, Haitian American Nurses Association, Chi Eta Phi Nursing Sorority, Kentucky African Americans Against Cancer, Operation Smile, Atlanta Lesbian Cancer Initiative, Council of Nurse Anthropologists, Royal Anthropology Society, and International Society of University Nurses.

Conclusions

A nursing education program's curriculum is based on its philosophy and mission, which communicate the program's values, how it operates, and its personality to the public. The content analysis of 73 nursing philosophies shows that most nursing programs respect the influ-

ence of culture or cultural diversity in health care and humanity. Several included direct comments about cultural influences in health and nursing. Overall, the reported cultural environment of the learning environments is somewhat proactive (i.e., celebratory of cultural diversity).

The frantic search for “cultural competence” appears at all levels of society. However, because nurses deal directly with patients, it is essential that they respond appropriately in various cultural contexts. What is “cultural competence”? The American Academy of Nursing (1995) defines it as “a complex integration of knowledge, attitudes and skills that enhances cross-cultural communication and appropriate/effective interactions with others.” This definition includes three important perspectives: knowledge, awareness and understanding. One needs to know how culture affects beliefs and behavior. Equally important is an awareness of one’s own cultural attributes and biases and how these affect others. Finally, one needs to under-

stand how the socio-political, environmental and economic contexts affect specific situations. In preparing students for work with a diverse population, nurse educators should emphasize cultural respect. This process requires that faculty and students continuously examine and critique themselves, their attitudes and their performance as practitioners. Nurses who know about cultural differences but lack awareness and understanding will be ineffective in communicating with people of different cultural backgrounds. Leaders in nursing education must work to ensure that faculty and students will be aware, will understand and will apply knowledge appropriately.

Glossary

Acculturation: The process by which different cultural groups change in the context of continuous close contact with each other.

Assimilation: The process by which different cultural groups come to have a common culture; a fusion of cultural heritages.

Cultural Competence: A complex integration of knowledge, attitudes and skills that enhances cross-cultural communication and appropriate interactions with others.

Cultural Diversity: The coexistence of several or many ethnic/subcultural groups in a geographical locality or organization.

Culture: A group's way of life and belief system that are learned, shared and historically transmitted to children or adoptive members.

Ethnic Group: A synonym for "subcultural group," as used in anthropology. The group is a socially, culturally and politically constructed collectivity of individuals who hold in common a set of characteristics not shared by others with whom they come in contact.

Ethnocentrism: A belief in the superiority of one's culture, cultural practices or lifestyle and the conviction that they are natural, normal and necessary.

Multiculturalism: An attitude or national doctrine that officially acknowledges and pro-

motes the existence of cultural diversity as an integral and necessary component of society.

Racism: A doctrine that unjustifiably asserts the superiority of one group over another on the basis of such arbitrary characteristics as appearance, intelligence or temperament.

Respect: An attitude toward others that is grounded theoretically in an acceptance of shared participation in a common moral community or, at least, a common humanity.

Transcultural: A practice or domain that appears in all cultural groups and thus transcends distinct groups — for example, child-rearing or incest.

Table 5

Commonly Used Teaching Strategies	<i>Rate the extent that you believe the faculty use the following strategies to incorporate cultural content and concepts into your program.</i>	
	N	Mean *
Students complete cultural assessments.	512	2.62
Students collaborate with classmates for comparative cultural analysis.	499	1.93
Students are required to read selected textbooks and periodicals.	531	3.16
Students participate in class lectures and discussions.	548	3.63
Students provide care for culturally different clients.	552	3.66
Students study abroad.	521	1.59
Students are immersed in a culturally diverse community.	534	2.78

* Rating scale: 4 = commonly used; 1 = not used at all

Table 6

Perceptions of Cultural Content in Nursing

Circle a number to rate your perceptions of (or program policies regarding) cultural content in the nursing curriculum.

	N	Mean *
Separate courses should be required.	545	2.29
Separate courses should be available to interested students.	547	3.37
Cultural content should be a thread that ties the curriculum together.	555	3.48
Cultural content should be integrated throughout the curriculum.	555	3.80
The inclusion of cultural content in the curriculum can reinforce stereotypes and create polarization.	553	1.48
Emphasis on cultural diversity is incongruent with our view of equality for all.	545	1.45
The content on cultural diversity is not standardized and quantified and cannot be evaluated effectively.	535	2.04
The curriculum is too full to add content on cultural diversity.	548	1.67
The teaching environment is tolerant of students who elect to disclose their sexual preference/orientation.	544	2.90
The institutional environment is tolerant of faculty who elect to disclose their sexual preference/orientation.	540	2.75
School policies and procedures reflect faculty cultural values and beliefs.	554	3.03
Students value the cultural course(s) and content.	539	2.96

* Rating scale: 4 = commonly used; 1 = not used at all
