Student and Faculty Diversity

Florida

Current College Faculty Do Not Reflect the Diversity of Their Students

Faculty diversity is not a new issue, but it is an important one. While the college student population has become increasingly diverse over the past decade, there are still far too few Black, Hispanic and American Indian or Alaskan Native faculty members.

![Graph showing student and faculty demographics for Florida](image)

- **General Population:** 41.4% of Florida’s general population are Black, Hispanic, or American Indian or Alaskan Native
- **College Students:** 46.6% of students at Florida 2-year and technical colleges, public 4-year institutions, and private not-for-profit institutions are Black, Hispanic, or American Indian or Alaskan Native
- **Faculty:** 23.2% of full and part-time faculty at Florida 2-year and technical colleges, public 4-year institutions, and private not-for-profit institutions are Black, Hispanic, or American Indian or Alaskan Native

Research shows that racial and ethnic diversity has positive effects on the educational experiences and outcomes of students. A recent study found that Black students who enroll in STEM courses taught by Black instructors are more likely to persist in a STEM field after their first year. In addition, some scholars posit that minority faculty members can help recruit underrepresented students, helping to diversify institutions. When the diversity of the student body is reflected in the faculty, underrepresented students can feel more connected to their institutions and students from majority groups have increased opportunities to benefit from a broader representation of perspectives.

## Representation in Florida

At the 2-year and technical college, public 4-year and private 4-year levels in Florida there is a representation gap between faculty and undergraduate students. Black, Hispanic, and American Indian or Alaskan Native scholars remain largely underrepresented at the faculty level. Asian student and faculty demographics are not disaggregated here because they are not historically underrepresented in the faculty context, particularly in the STEM fields.
