Disclaimer: This publication was prepared pursuant to a grant with the Office of Vocational and Adult Education, U.S. Department of Education. Grantees undertaking such projects under government sponsorship are encouraged to express freely their judgement in professional and technical matters. Points of view or opinions do not, therefore, necessarily represent official U.S. Department of Education position or policy.

Discrimination: Title VI of the Civil Rights Act of 1964 states: "No person in the United States shall, on the ground of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal financial assistance." Title IX of the Education Amendments of 1972 states: "No person in the United States shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving federal financial assistance." Therefore, the National Center for Research in Vocational Education project, like every program or activity receiving financial assistance from the U.S. Department of Education, must be operated in compliance with these laws.

EXECUTIVE SUMMARY

There is a growing national sentiment to educate all students in programs which reflect the diversity of the local general student population. This resource guide is directed towards professionals and practitioners who are interested in strategies, resources, programs, and research concerning inclusion, detracking, ability grouping, mainstreaming, and cooperative learning. It contains descriptions, cost, and contact information for selected (1) references, including newsletters and journal articles; (2) educational information centers; and (3) organizations. To the extent possible, the resources listed address students in vocational education and integrated programs.

PREFACE

Societal demands and legislative mandates have called for changes in the way we educate students, especially those traditionally served in special education or "tracked" into separate programs. There is growing sentiment to educate all students in programs which reflect the diversity of the local general student population. Strategies to decrease the
isolation of students with disabilities include mainstreaming, least restrictive environment, and inclusion. Teaching strategies such as cooperative learning, curriculum integration, and project teaching are useful techniques in eliminating tracks such as general education, vocational education, and college prep.

This resource guide grew out of increasing requests for information from the Office of Special Populations on the inclusion of students with disabilities into regular education programs and on eliminating ability grouping and tracking. This guide contains descriptions, cost, and contact information for (1) references, including newsletters and journal articles; (2) educational information centers; and (3) organizations. It is more selective than comprehensive and, to the extent possible, highlights resources that address students in vocational education and integrated programs.

The publications section is divided into the following categories: general information, access and equity, program administration, professional development, curriculum and instruction, and comprehensive support services. There are separate sections for newsletters, journals, educational information centers, agencies, and organizations; exemplary programs and practices, including brief information on some of the state systems change grants that address vocational education and also students in the secondary and postsecondary levels; curriculum centers; and a listing of state-level personnel who are available to assist local educators.

THE OFFICE OF SPECIAL POPULATIONS

Mission

The Office of Special Populations works nationally to increase vocational program accessibility, quality, and availability for youth and adults from special populations. It is one of the five Dissemination and Training Programs in the National Center for Research in Vocational Education at the University of California at Berkeley.

Objectives

To increase awareness and understanding of critical issues in vocational special needs education:

To increase awareness and appreciation of the School-to-Work Opportunities Act's emphasis on ensuring the full participation of a diverse population of students in the full range of available school-to-work activities and opportunities.

To increase the use of available resources.

To initiate and support networks of professionals.

To promote exemplary program activity and the adoption of model practices.

To maximize the impact of the Office of Special Populations' resources and activities through collaborative activities with state and national organizations.
Children with Exceptional Needs in Regular Classrooms

This book links the recent changes that have taken place in the education of students who have exceptional needs with the results of research and preferred instructional strategies. The book explores three themes: (1) changes that have occurred in the education of students who have exceptional needs, (2) the legal requirements in educating exceptional students, and (3) emerging trends and preferred practices for teaching exceptional students in the regular classroom. While most of the research recommends that all students be included in the regular classroom, some of the research urges that there needs to be careful thought about how all children can be included in regular classrooms. (183 pages, $11.95)

The Disadvantages of Tracking and Ability Grouping:
A Look at Cooperative Learning as an Alternative

Tracking/ability grouping is an educational practice that has existed for over 100 years. The authors of this article view tracking/ability grouping as a harmful educational practice which results in lower educational attainment and higher dropout rates, especially for students living in poverty and for minority students. They view cooperative learning strategies as effective alternatives for students who need optimum preparation for the challenges of citizenship for the twenty-first century. The authors list several cooperative learning models with proven benefits to students. Through their study, the authors have found that cooperative learning strategies appear to be more effective than tracking/ability grouping for increasing academic and social skills achievement of at-risk students. The Inclusion Revolution, Research Bulletin, 11

Written for Phi Delta Kappa members, this paper traces the inclusion movement and discusses issues affecting the implementation of inclusion for students with disabilities. The discussions focus on the "down side" of inclusion, how inclusion affects classmates, and supplementary aids and services. It includes definitions of terms that have been used to describe inclusion such as mainstreaming, full inclusion, and regular education initiatives. A list of resources and a checklist for evaluating whether school personnel practices are consistent with the best intentions of the inclusion movement are included. (6 pages, no charge)

Available From:
Office of Special Populations
345 Education Building
1310 S. Sixth Street
Champaign, IL 61820
(217) 333-0807
When developing an inclusive educational system, many challenges and questions can result. The author addresses these issues by offering suggested solutions from researchers and practitioners to improve the process of preparing students for life after school. The author also provides examples on how education personnel can design a workable system for students with disabilities. No matter what the "ideal system" may be for each school, the author strongly urges the establishment of an inclusive education system. (1 page, no charge)

Minneapolis, MN 55455
(612) 624-4512

The authors have compiled this resource guide in an effort to provide educators and families with information about including learners with severe disabilities into general education classes and school community life. The guide includes resources about successful inclusive education models and strategies, as well as materials that provide a sound rationale and empirical support for inclusion. The resources are listed alphabetically within ten categories: journals; journal articles; books and book chapters; newsletters; newsletter issues and articles; audiotapes; videotapes; organizations; and publications of the Institute on Community Integration of the University of Minnesota. Issues and Research in Special Education, Volume I
This first volume of *Issues and Research in Special Education*, a new offshoot of the *Teachers College Press Special Education Series*, brings together some of today's leading authorities on special education to examine the latest issues and research in this expanding field. The series is designed to provide professionals with an overview of significant developments and theoretical advances in special education. Volume I identifies key areas currently attracting attention and offers the perspectives of prominent researchers in the field. Topics in this book include research methods in special education, integration of students with severe and profound disabilities, research in vocational special education, education and community integration experiences of deaf adolescents and young adults, and dynamic assessment. This book will serve as a reference tool for teacher educators, researchers, professionals, and graduate students. (448 pages, $58.95)

**LRE and the Placement of Students with Severe Disabilities. The Journal of the Association for Persons with Severe Handicaps, 17(3)**

In order to more closely identify and analyze factors that might influence national monitoring and reporting of LRE issues, this study examined the variability between states in the placement of students with severe disabilities in integrated or segregated settings. Three states, which represented urban, suburban, and rural population bases, participated in a survey requesting information on the number of and the educational placement of students with severe disabilities. Results from the study indicated that the means states utilize to obtain child count data for reporting under Section 618 of the Education for All Handicapped Children Act are not sufficient to meet present informational needs. **A National Survey of Mainstreamed Hearing Impaired High School Sophomores. Journal of Rehabilitation, 51(1)**
After the collection of data from high school sophomores with hearing impairment and their peers with normal hearing on demographic characteristics, academic achievement, and indices of motivation, contrasts between the two groups were evidenced in demographics. The students with hearing impairment tended to be a little older and also had a higher incidence of Hispanic background than the normal hearing group. Results from the survey showed statistically significant differences in the academic achievement of the students. The results revealed that the students with hearing impairment had an academic disadvantage. Results on the indices of motivation were somewhat mixed. Both groups reported taking essentially the same coursework and watched approximately the same amount of television. A difference between the two groups was found with the students with hearing impairment indicating that they did less homework and had less ambition for future plans. (4 pages)

Promoting Inclusion for All Students with Disabilities
Cambridge, MA: Center for Law and Education.

Despite federal provisions, children with disabilities have been isolated, provided less than meaningful alternatives, and denied equal educational opportunities. This paper outlines the barriers to full inclusion experienced by students with disabilities and the legal basis for establishing the rights of students with disabilities to be educated with their nondisabled peers. The author also suggests questions and strategies for advocates to consider to challenge exclusion or denial of full inclusion. (17 pages, $5.00)

Restructuring for Caring and Effective Education:
An Administrative Guide to Creating Heterogeneous Schools

Restructuring schools to serve diverse students is a difficult process. It involves a "marriage" between two separate
entities: regular and special education. The authors advocate this marriage and a rationale for restructuring towards heterogeneous schooling. This book assists schools in mapping a new direction for educational change. It also offers advice for forging the union and making it successful. The main focuses are on children with handicaps and mainstreaming. (362 pages; $30.00, plus shipping and handling)

Their Senior Year: Family and Service Provider Perspectives on the Transition from School to Adult Life for Young Adults with Disabilities. The Journal of the Association for Persons with Severe Handicaps, 19(1)
Seattle, WA: The Association for Persons with Severe Handicaps.

The purpose of this research was to obtain information on the transition process from school to adult life for students with disabilities. From the data gathered on 11 students with disabilities, the following eight themes emerged: (1) differing future expectations for young adults with disabilities; (2) inconsistent implementation of special education curricula and lack of inclusive educational practices; (3) lack of transition-related knowledge; (4) hastily and poorly coordinated transition planning; (5) a prevalence of restrictive views on employment and community living opportunities for adults with disabilities; (6) low levels of family participation; (7) outcomes of unemployment and isolation for most young adult participants; and (8) significant benefits of supported employment and community inclusion. The article discusses implications from these themes and gives recommendations for service practices. (13 pages)

PUBLICATIONS

Access and Equity
Many schools have failed in providing basic opportunities for the development of literacy, social skills, and values to their students especially to students of color. The objective of the article is to clarify the magnitude of the problem of African American and other students' maldistributions across tracks and ability groups, as well as to examine the link between tracking and students' educational aspirations and attainments. The authors address these issues by utilizing a national survey which analyzes recent trends in secondary-level tracking, discusses the implications of tracking for the educational aspirations of the middle grade and high school attainments, and considers alternative strategies schools can use to address problems of student diversity and to develop effective instructional strategies for heterogeneous classes. The findings have many policy implications for equity and excellence in American education. The authors urge for alternatives in the education system of America that are effective and innovative in responding to student diversity. (13 pages)

Access and Equity in Vocational Education (Trends and Issues Alerts)
ERIC Clearinghouse on Adult, Career, and Vocational Education. (1988).
Columbus, OH: Author.

In order to serve members of special needs groups successfully, vocational educators must create programs that are both accessible and equitable. To address this concern, this document begins with an overview of trends and issues in the area of access and equity in vocational education. The overview briefly addresses emphasis in federal vocational education legislation on support of increased vocational education opportunities for special target populations, lack of success to date in certain areas of access and equity, and the bases of future policy to support access and equity goals. A list of ERIC resources, other print resources, and organizations that provide information about access and equity are included. Access to and Use of Vocational Education in Teen Parent Programs
Berkeley: National Center for Research In Vocational Education, University of California at Berkeley.

What role does vocational education have in programs for pregnant and parenting teens? What role should it have? Until recently, most programs for these groups have seldom offered vocational education to enrollees. This report examines the range of vocational education opportunities available to young mothers in teen parent programs; explores the degree of access to these opportunities; examines vocational education use; and assesses the likely impact of the Family Support Act on teen parents and on the programs that serve them. Discussions within the report address the issues and dilemmas that underlie reduced use and utility of vocational education in programs for pregnant and parenting teens. Considerations to be discussed by program planners and vocational educators serving these groups are identified. (MDS-152, 92 pages, $6.50)

Access to Post-Secondary Education: A Faculty Handbook (Rev. Ed.)
Great Falls, MT: Great Falls Vocational-Technical Center.

Developed by Project ACCESS staff, this handbook was designed to assist faculty who teach at the postsecondary level to better understand and make academic accommodations for students with disabilities, thereby improving their chances for success and maximizing their educational opportunities. This handbook suggests adjustments which can be made in the environment or in teaching styles to accommodate specialized needs without affecting academic integrity. The information in this handbook should help eliminate barriers to learning and serve as a general guide for maximizing educational opportunities. (38 pages, $5.00)

Blueprints for Indian Education: Research and Development Needs for the 1990S

Two landmark efforts to describe the condition of American Indian and Alaska Native education nationwide and to call for specific solutions took place in the early 1990s. These efforts were (1) the Indian Nations At Risk Task Force (INARTF) and (2) the White House Conference on Indian Education (WHCIE). The work of the INARTF and WHCIE resulted with many clear directives to improve American Indian and Alaskan Native education. This Digest is the first in a planned series that presents the findings of the Task Force and Conference. It synthesizes research, development, evaluation, and dissemination needs related to American Indian and Alaska Native education. (2 pages, no charge)

Decisions in Sequence: How to Make Placements in the Least Restrictive Environment. EDLAW Briefing Paper, 2(9-10)

This EDLAW Briefing Paper addresses both the problem of what constitutes placement in the least restrictive environment and how that placement is to be realized in a manner that is sound both conceptually and legally, while providing a methodology that can be easily implemented. After providing definitions of terms associated with the least
restrictive environment, the primary discussion examines the factors affecting placement decisions and proposes a model for making decisions that conform with what the law requires. In addition, the model is tested against case law; this analysis is presented separately in the boxed text that appears on each page. Requests for permission to reprint and distribute this issue are encouraged and will be treated liberally. (17 pages)

Educational Programs and Achievements of Secondary Special Education Students: Findings from the National Longitudinal Transition Study

In 1983, Congress mandated that the U.S. Department of Education conduct a national study of youth in the years of transition from secondary school to adult living. This study addresses three major questions: (1) what educational programs and other services are provided to secondary special education students, (2) how well secondary special education students do in school, and (3) what student characteristics are related to school performance. The findings reported offer some new information regarding school programs of secondary youth with disabilities. While schools were the primary provider of services such as speech therapy, personal counseling, and occupational therapy for secondary special education students, more than half of the students received none of the services investigated as adjuncts to their special education instructional program. New insights on school achievement are also discussed. (43 pages, $5.00)

Ensuring Quality School-to-Work Opportunities for Young Women

Results from a study conducted in 1993 by Wider Opportunities for Women (WOW) investigate how some of the U.S. Department of Labor's School-to-Work Transition demonstration sites were serving young women. WOW's findings show that new and supposedly "state-of-the-art" training continues to perpetuate sex bias and sex stereotyping that can result in continued wage disparities between men and women. However, WOW noted that young women can succeed in nontraditional school-to-work programs. The report features the success of the Manufacturing Technology Partnership
in Flint, Michigan, a model nontraditional School-to-Work Transition demonstration site, in recruiting and retaining young women in automotive technology. WOW strongly recommends that legislative initiatives focusing on the training of women for nontraditional jobs be passed and actively implemented as part of School-to-Work Opportunities Act programs. Factors That Affect Nontraditional Vocational Enrollment Among Women. *Psychology of Women Quarterly, 9*
New York: Cambridge University Press.

Personality and external factors differentiate women who enter male-dominated vocational training programs from those who only consider entering such programs and from those who enter female-dominated programs. Four hundred seventy women who were enrolled in California vocational training programs, stratified on both social class and type of vocational training site, completed a self-administered questionnaire covering (1) demographic/family background, (2) social support/encouragement from others, (3) peer experience with nontraditional programs, and (4) personality and sex-role orientation. Results revealed that the student subgroups differed most significantly in the amount of support, encouragement, and discouragement they received from the important others in their lives. Nontraditional students differed from traditional students primarily in the support of female friends and family members. In addition, nontraditional students differed from those who only considered entering a nontraditional vocational program in the amount of encouragement from school personnel. Recommendations are made for steps that can be taken to foster equality of educational opportunity. (13 pages)

Final Report, Volume V: Handicapped and Disadvantaged Students: Access to Quality Vocational Education

This report describes the access of high school students who are disabled and academically disadvantaged to vocational education and analyzes the quality of the programs in which these students participate. Questions addressed include whether disabled and academically disadvantaged students have access to a full range of high-quality vocational
programs, how demographic characteristics affect such access, and to what extent vocational programs and course-taking options differ across schools. It also contains implications of the findings for federal resources targeting. Recommendations include expansion of female disabled and disadvantaged students' enrollments in nontraditional programs; increased participation in cooperative education; emphasis on expanding placement activities; targeting of funds for schools with high concentrations of special needs students; and the availability of occupationally specific programs in area vocational schools, particularly for female and minority students. The Growing Need for Quality Vocational Education Programs for Individuals with Limited English Proficiency (LEP), (TASPP Brief, 1(4)

A significant and increasing number of Americans speak a language other than English at home. It is crucial that vocational education programs are capable of meeting the needs of these individuals. This BRIEF highlights recent research related to LEP individuals in vocational education. The following topics are reviewed: educational and economic correlates of limited English proficiency, problems encountered by members of this minority group in trying to access vocational education programs, the components of exemplary vocational programs for LEP individuals, and research needs. **Immigrant Students: Their Legal Right of Access to Public Schools: A Guide for Advocates and Educators**
Boston: National Coalition of Advocates for Students, The Immigrant Student Program.

The manual addresses prohibited and recommended Plyler (the Supreme Court ruling on the right of access of immigrant children to public schools) right of access practices for educators, advocates, and school lawyers. The first section outlines prohibited and recommended everyday school practices. The second section addresses the Plyler right of access and the legal reasoning behind it. The role that parents and community members need to play to ensure that schools abide by and respect the Plyler rights of immigrant students is also discussed in the third section. Included also are supplements pertaining to legal information affecting nonimmigrant students in the U.S. and regulations and policy statements which may serve as models for advocates in other school districts. (51 pages, $12.00)
Issues in Vocational Education for Special Populations in Rural Areas, (*TASPP Brief, 2*(2))  

Some of the problems which practitioners face when serving students with special needs in rural vocational education programs are identified in this BRIEF. The following solutions which have been proposed to eliminate these barriers are examined: educational cooperatives, administrative action, use of available technology, entrepreneurship, school/business partnerships, and mobile facilities units. Manual for Accessibility, Conference, Meeting, and Lodging Facilities as Adopted by the National Rehabilitation Association (Rev. Ed.)  
Alexandria, VA: Author.

A significant percentage of our population has difficulty accessing the environment due to permanent or temporary disabilities, and there is widespread misunderstanding about what constitutes minimum standards of accessibility. This illustrated manual describes the National Rehabilitation Association's criteria used in selecting meeting sites and making meetings accessible to people with disabilities. The manual also serves as an orientation and training resource within the Association and for use with business and industry, especially with hotels, convention centers, and restaurants. It includes survey forms designed to be used to evaluate accessibility. (30 pages, $75.00)

A Model to Improve the Quality and Quantity of Minority Student Participation in Vocational-Technical Education Programs

A model for improving the participation of minorities in vocational-technical programs is presented in this handbook. Implemented at Dawson Technical Institute, one of the City Colleges of Chicago, the model consists of eight components: (1) recruitment, (2) intake/admissions, (3) assessment, (4) counseling/career planning, (5) financial aid/registration, (6) program placement/retention, (7) job placement, and (8) follow-up/evaluation. The handbook provides a description of each component. The appendix, which contains samples of materials (e.g., letters, assessment forms, course outline, and evaluation sheets), would be of great help to those interested in adopting the model. (51 pages, excluding appendix; $6.25; Item #445)

New Voices: Immigrant Students in U.S. Public Schools

This report documents the encounter between the children of the great immigration wave of the 1970s-1980s and U.S. public schools. It identifies a host of problems which these students and the schools create for each other, and offers recommendations for change in school policy and practice, which would make public schools more responsive to immigrant and LEP children's needs. (176 pages; single copy, prepaid price for schools libraries, and other institutions, $12.95; single copy, prepaid price for individuals, $9.95; add $2.00 per copy for postage and handling)

Participation of Special Education Students in High School Vocational Education: The Influence of School Characteristics
Berkeley: National Center for Research in Vocational Education, University of California at Berkeley.

Using data from the High School Transcript Study of the Class of 1987, this paper explores the characteristics which distinguish schools that enroll large proportions of their handicapped students in vocational education courses. The school characteristics examined describe the ecological and sociological environment of the school.

The researchers found that schools serving disadvantaged populations and schools with relatively large enrollments enrolled fewer students with handicaps in vocational education overall and fewer students with handicaps in mainstream vocational education courses. The author offers explanations for the findings presented. (MDS-019, 50 pages, $4.00)

School-College Alliances: Benefits for Low-Income Minorities (ERIC Digest No. 53)
New York: ERIC Clearinghouse on Urban Education.

The encouraged growth of high school-college collaboration is promoted in this Digest as the means to provide equal access to educational opportunities for disadvantaged minority students. Student development, and school and college improvement are discussed separately in answering the question of why schools and colleges collaborate. Types of collaborative activities, the process of collaboration, and networks of collaboratives are also discussed. In conclusion, the issues of control and who really benefits are primary concerns of the process. (1 page, no charge)

School-to-Work Transition Services for Disadvantaged Youth Enrolled in Vocational Education

Conducted as part of the National Assessment of Vocational Education, this study is intended to contribute to the development of federal strategies for improving the delivery of transition services to disadvantaged students enrolled in vocational education. Two issues are examined: (1) the circumstances underlying the school-to-work transition problems of disadvantaged youth, and (2) strategies that school systems have adopted to address these problems.

Problems that limit the disadvantaged youth's labor market success are discussed in the study. Four school districts offering transition-related services were also studied. To encourage more successful school-to-work transitions, while accommodating current diversity in local circumstances and preferences, the study suggests that federal vocational education programming adopt a new priority on improving linkages between disadvantaged youth and employers. Program components identified as playing key roles in encouraging the creation of employer linkages with disadvantaged youth include early intervention; the availability of tutors, mentors, and advocates; supervised work experience; and placement assistance. Step by Step: The Educational Equity Options Project. A Program Manual
Washington, DC: Wider Opportunities for Women.

This manual provides a step-by-step process for implementing the Educational Equity Options (EEO) Project, and serves as a catalyst for sex equity activities within an educational institution. Developed by Wider Opportunities for Women, EEO is a seven-step approach to increase the number of female students entering and succeeding in nontraditional occupational education. Contained in this manual is an overview of the seven steps and a detailed guide on how to implement the project. A selected list of educational equity resources is also included. (180 pages, $45.00)
Successful Detracking in Middle and Senior High Schools (ERIC Digest No. 82)
New York: ERIC Clearinghouse on Urban Education, Institute for Urban and Minority Education.

Although tracking remains controversial, there has been a recent policy consensus that the negative effects of tracking on lower track students are so severe that schools should move towards detracking. This digest identifies and explains the factors that lead to successful detracking. It briefly describes the accelerated schools—a school restructuring model that has been successful in detracking. (2 pages, no charge)

Vocational Education for Special Populations: Recommendations for Improving State Policy
Berkeley: National Center for Research in Vocational Education, University of California at Berkeley.

Three aspects of equity embedded in the Perkins Act are examined in this paper: (1) the extent of access which special needs youth and adults have to programs and services, (2) the effectiveness of various programs and services locally received, and (3) outcomes realized by special students participating in vocational education. The examination is accomplished through summaries of recent studies, related evaluative and empirical literature, and data from longitudinal studies. The paper gives primary attention to youth who are disabled, disadvantaged, or limited English proficient in secondary vocational education programs.

A set of general conclusions and recommendations for improving state policy is presented. These recommendations should be of interest to policymakers at both the state and federal levels as they examine alternatives for implementing the 1990 Amendments to the Perkins Act (PL 101 392). The appendix contains
brief summaries of major studies of vocational education programs effectively serving students with special needs. (MDS-031, 66 pages, $5.00, ERIC Document Reproduction Service No. ED 336 567)

Vocational Education Performance Standards (ERIC Digest No. 96)
Columbus, OH: ERIC Clearinghouse on Adult, Career, and Vocational Education.

This digest focuses on vocational education experiences with outcome measures, describes proposed approaches, and enumerates potential issues and challenges in establishing performance standards for vocational education. The Digest describes three outcome measures and discusses the assets and drawbacks of each: (1) labor market outcomes (placement, earnings, and employment duration); (2) learning outcomes (measures of occupational competency); and (3) access outcomes (access to vocational programs by women, minorities, and special needs students). It recommends using a combined set of indicators that address each of these issues, and refers to two such programs in Iowa and Minnesota. Issues, challenges, and potential problems in implementing performance standards are described, including the impact on learners, the influence of program type, and the difficulty of setting minimum standards. It concludes that there are both positive and negative aspects to performance measurement. A list of references is included. (1 page, no charge)

Vocational Education: Status in School Year 1990-91 and Early Signs of Change at Secondary Level
Gaithersburg, MD: Author.

The Carl D. Perkins Vocational and Applied Technology Education Act Amendments of 1990 required the General Accounting Office (GAO) to conduct studies to determine changes occurring in vocational education programs after the amendments took place. This interim report provides preliminary information to the House
Education and Labor Committee and to the vocational education community on (1) the status of vocational programs in secondary schools in school year 1990-1991 and (2) changes reported in school year 1991-1992.

The GAO's study presented the following major findings: (1) many quality components are missing in most schools, but districts have reported that change has begun; (2) students who were members of targeted groups participated in vocational education programs at rates equal to or higher than other students in the school years immediately preceding and following the 1990 amendments; and (3) there is a need to improve data collection efforts so that adequate assessment of vocational education can take place. PUBLICATIONS

Program Administration

Alternative Education Programs: A Prescription for Success
Athens: University of Georgia, College of Education.

Not all students respond positively to a traditional education program structure or instruction. Many have needs and interests that require alternative curricula, alternative modes of instruction, and alternative organizational structures. If alternative education programs are not available to these students, many will lose interest, become disruptive, fail, or drop out. Carefully planned and implemented educational alternatives increase the probability of success for nontraditional students. This report is intended to offer suggestions and strategies for planning and implementing alternative education programs.

This publication includes descriptions of five commonly accepted models, including alternative classroom, school-within-a-school, separate alternative school, continuation school, and magnet school; successful programs in Georgia; a strategy for planning alternative programs based on local school and community needs; and a strategy for effective program implementation.

The appendices contain suggested forms such as an alternative education survey, needs assessment, and a form for gathering student information. Lists of funding sources and alternative educational programs in Georgia and elsewhere are also included. (130 pages, $10.00)

Address:
Schools need to be reformed in order to make them meaningful and effective for all students. This publication addresses the mission of PL 94-142 in the second decade of its implementation. The book chapters were written for general and special educators, parents, and policymakers. The chapters are divided into four sections: (1) background and current situation; (2) classrooms and schools; (3) teachers, parents, and students; and (4) next steps. In section one, chapters address issues concerning the current educational system and school improvement. Section two focuses on integrating students with disabilities and disadvantages educationally, socially, and vocationally. Different programs and adaptive instruction are also discussed. Chapters detailing teacher preparation, the roles of parents, whether or not the laws have made a difference from the perspective of some students with disabilities, and the relationships of students with each other in integrated classrooms are found in section three. Section four concludes the book by overviewing the politics of special education, the right to an effective education, and the building for the future. (336 pages, $32.00)

Detracking Schools: Early Lessons from the Field. *Phi Delta Kappan*, 73(6)
Bloomington, IN: Phi Delta Kappa.

The authors suggest that tracking and ability-grouped class assignments have had negative consequences for most children. One national report identifies tracking as a barrier for many students' paths to college. Through their research, the authors have discovered that a culture of detracking is more important than the specific strategy chosen. School models that successfully detrack possess characteristics that help to build a culture of detracking: (1) recognition that tracking is supported by powerful norms that must be acknowledged and addressed as alternatives are created; (2) willingness to broaden the reform agenda, so that changes in the tracking structure become part of a comprehensive set of changes in school practice; (3) engagement in a process of inquiry and experimentation that is idiosyncratic, opportunistic, democratic, and politically sensitive; (4) alterations in teachers' roles and responsibilities, including changes in the ways adults in the school work together; and (5) persistence over the long haul that is sustained by risk-taking leaders who are clearly focused on scholarship and democratic values. (7 pages, $4.50/single issue)

Washington, DC. National Education Association.

Efforts to integrate students with special needs and regular students are becoming very controversial. This publication is the product of a discussion and debate participated in by regular and special education teachers and representatives of the educational research and policy, practice, teaching, and advocacy group communities. They examined practices that lead to the successful inclusion of students with special needs in regular education
classrooms. Three papers present the policy perspective on what works from the view of parental, teacher stakeholders, local, and state. In addition, three papers present the research perspective on how to create quality in schools and classrooms. (63 pages, ERIC Document Reproduction Service No. ED 353 708; cost varies by document)

Integration of Visually Handicapped Students in Industrial Education Classes: An Overview. *Journal of Visual Impairment & Blindness*, 78(7)

Many issues need to be addressed in order to successfully integrate students with visual impairment into industrial education classes. These issues include attitudes of teacher and student, teachers' familiarity with visual impairments, orientation and mobility training, class size, safety provisions, curriculum modification, acquisition of and training with adaptive equipment, and educational resource support. The author stresses the importance of inservice training as it can provide educators with an explanation, experiences, and understanding of visual impairments, teaching techniques, available aids, and resources. Nasty Girls, Thugs, and Humans Like Us: Social Relations Between Severely Disabled and Nondisabled Students in High School

The goal of this book is to enhance the understanding of events that occur when teenagers with disabilities attend a regular high school. The author describes the experience of a participant-observer in an inner-city high school of the San Francisco Unified School District and documents how a school's integration program affected student relations and teacher practices. The author presents the results of an ecological analysis of the school's social system and relates these results to quality education, student diversity, and social inequality. The book provides
a historical and theoretical perspective on the special education work at an inner-city high school, describes the school's social and physical environment with a concentration on the interaction between disabled and nondisabled students (and the students' understanding of those contacts), and analyzes the school's social ecology speculating about future research and educational practice. (216 pages, $22.00)

Promoting Effective Educational Practices Through Public School and University Partnerships: A Tale of One City's Response to Full Integration
Green Bay: University of Wisconsin-Green Bay.

This paper presents a report on a three-year integration project in progress in an elementary school located in Green Bay, Wisconsin. The report is intended to describe the first year's activities and findings and outline plans for the next two years. Three questions were the focus of the study: (1) What are the current integration practices employed within the school?, (2) What evidence do we have to show that integration results in academic success for students with exceptional educational needs?, and (3) What are the current perceptions of teachers, parents, and students regarding the current integration practices implemented in the school? The results shed some light on the perceptions teachers hold on full integration. Also included is a listing, based on a relevant literature review, of essential elements for effective integration practices. (27 pages, no charge)

Report Card to the Nation on Inclusion in Education of Students with Mental Retardation
Arlington, TX: The ARC.

To determine the extent to which children with mental retardation are being educated in inclusive settings, The Arc analyzed the latest data on educational placements of students with mental retardation contained in the Fourteenth Annual Report to Congress on the Implementation of the Individuals with Disabilities Education Act (1992). The report summarizes data for the 1989-90 school year reported by all states to the federal government
regarding children receiving special education and related services.

This report provides an analysis of national and state data on the following questions: (a) To what extent are children with mental retardation being educated in the same classrooms as their nondisabled peers?, (b) To what extent are states using resource rooms to educate students with mental retardation?, (c) To what extent are students with mental retardation being educated in separate classrooms?, (d) To what extent are students with mental retardation being educated in separate schools?, and (e) What percentage of students with mental retardation receive their education in separate classrooms and separate schools? The paper concludes by providing a summary of major findings, a discussion, and a call to action. (28 pages, single copy, no charge)

Secondary Programs for Students with Developmental Disabilities

Critical issues in the design and implementation of secondary programs for students with developmental disabilities are addressed in this book. Current research on best practices in secondary programs is presented, as well as goals that may be used to guide program operation. Strategies are included for individualized education and transition planning development procedures, the design of community and classroom instructional programs, and the promotion of the full integration of students with developmental disabilities into the school and community. Procedures are outlined for carrying out employment training, conducting training on personal management and leisure activities, and supporting the involvement of parents in the educational program. Each of the chapters includes practical guidelines and forms to be used by classroom teachers. (315 pages, $34.50)

Needham Heights, MA 02194-2310
(800) 852-8024

The goal of social integration is shared across disciplines and espoused as a universal value in today's society; however, considerable controversy exists regarding the process most likely to result in the attainment of this goal
for persons with severe disabilities. Proponents of traditional rehabilitation-remedial models propose delivery of intensive services in segregated environments especially designed to meet individual needs. Conversely, proponents of full inclusion models maintain that services be provided in the mainstream of school and society.

In the current study, the effects of integrated versus segregated schooling upon the educational and social competence of children with severe developmental disabilities were examined across a two-year time period, using both classroom observation and standardized child-assessment measures. Children in integrated learning environments spent less time with therapists, equal time with special education teachers, more time with teaching assistants, more time with children with and without handicaps, and less time alone than did children in segregated learning environments. No differences were found on a traditional measure of developmental skills; however, on a measure of social competence, integrated children progressed, whereas segregated children regressed. Implications of these results are discussed in the context of public attitudes toward disability and educational reform in the mainstream of America's schools. (12 pages)

Techniques for Including Students with Disabilities:
A Step-by-Step Practical Guide for School Principals
Lansing, MI: MPI School and Instructional Supplies.

This guide is designed for use by school principals, teachers, district directors, school improvement teams, directors and supervisors of special education, superintendents and boards of education. Its purpose is to assist educators in organizing a school environment that is accepting, responsive, and accountable, when striving to include students with disabilities throughout the school.

The first four chapters focus on essential components for effectively including students with disabilities. The remaining chapters address specific areas identified by building-level staff, principals, and parents as needing attention in facilitating the successful inclusion of students with disabilities in the school setting. In addition to the content, each chapter includes the following Information: building checklist, suggested ways to enhance the school environment, goal development and plan of action. Transitions to Least Restrictive Environments: A Guide to Transition (Rev. Ed.)
Windsor, CT: Capitol Region Education Council.

The transition of special education students to less restrictive environments or from school to work stresses the importance of planning and communication during the entire process, from initial plans through implementation and follow-up. Section one of this guide consists of a transition process checklist to aid in the organization and follow through of transition activities. Section two consists of answers to commonly asked questions about each of the following steps in the transition process: Individualized Education Plan (IEP) design, placement, change in living arrangements, assessment, timing, instruction, staff identification, staff needs assessment, staff training, visits by staff to the current placement, visits by staff/parents to the new placement, visits by the student to the new placement, the transition team, IEP modification, the student schedule, peer "sensitization," informing regular education parents, curriculum and evaluation modification, plant modification and equipment, transportation, coordination of related services, communication systems, students' records, medical services, transition, the student support group, support activities for family and siblings, the follow-up support team, and monitoring and modification. Appendices include a sample ecological inventory, a transition timeline, a listing of topics related to the least restrictive environment, and a student checklist. Untracking and College Enrollment: Research Report 4
Santa Cruz: University of California at Santa Cruz.

Preliminary results of a program which was administered as an alternative to compensatory education are presented in this study. Advancement Via Individual Determination (AVID) is an untracking program developed by the San Diego school system. The program places low-achieving students in college preparatory classes and provides them with a strong system of social and academic supports. This research report examines the educational consequences of the AVID untracking program as measured by students' college enrollment. Preliminary results demonstrate that AVID students are enrolling in college in percentages that exceed local and national averages. Why Ability Grouping Must End: Achieving Excellence and Equity in American Education
Baltimore, MD: Center for Research on Effective Schooling for Disadvantaged Students, Johns Hopkins University.

This review of research focuses on policies and practices that result in placing students in groups that are more or less homogeneous with respect to academic performance. Braddock and Slavin's recent analysis of data from the National Education Longitudinal Study of 1988 provides the largest and best-controlled multi-year study of ability grouping ever conducted. The outcomes of scores of studies have been similar, and these outcomes are discussed in the following categories: (1) opportunities to learn; (2) ability grouping and achievement; (3) ability grouping and segregation; (4) ability grouping and intergroup relations; (5) ability grouping, self-esteem, and feelings of inferiority; (6) ability grouping, delinquency, and dropouts; and (7) alternatives to ability grouping. The research proves how ability grouping must end because it is ineffective, harmful to many students, and damaging to interracial relations and democratic society. Effective and practical alternatives exist. Public schools must provide more equitable access to learning opportunities that develop reasoning, inference, and critical thinking skills. Major school restructuring will be necessary to develop the needed alternatives. (24 pages, ERIC Document Reproduction Service No. ED 355 296, cost varies by document)

Winners All: A Call for Inclusive Schools
National Association of State Boards of Education Study Group on Special Education. (1992, October).

Dual special education/general education bureaucracies that exist today in most states have hindered collaboration between special and general educators. This report presents the result of the National Association of State Boards of Education Study Group on Special Education's two-year study on the state of special education. The study group recommends the creation of an inclusive system that strives to produce better outcomes for ALL students. In such a system, special educational services are provided as a support to students who need them in order to achieve the outcomes expected of all students, and general education and specialized services complement and support each other.
To create this new system, the group recommends that state boards (1) provide leadership in creating a new belief system and vision for education in their states; (2) foster collaborative partnerships and joint training programs between general educators and special educators; and (3) work with state departments of education to revise funding, placement, and labeling. Professional Development

Collaborative Teaming for Inclusion-Oriented Schools: A Resource Manual
Kansas State Board of Education. (1992, December).
Topeka: Author.

This resource manual focuses on the development and enhancement of student program planning teams in schools oriented to inclusive education of students with disabilities. First, the terms "inclusion," "integration," and "mainstreaming" are clarified. Then, the challenge of developing instructional and behavioral plans that allow students to learn together is emphasized, outlining the need for administrative support, shared ownership of all children, collaborative teams, year-round transition and program planning, access to consultation and technical support, staff development, and school and home collaboration. The manual defines a "team" as a set of interpersonal relationships structured to achieve established goals. Members of the student planning team are listed. Essential elements of effective teams are discussed, including positive interdependence, face-to-face interaction, individual accountability, development of collaborative skills, and group processing. Appendices provide team activities, various team forms, a team member checklist, and a team self-evaluation checklist. (44 pages, no charge, ERIC Document Reproduction Service No. ED 359 742)

Developing Effective Vocational Programs for Mentally Retarded Persons: Cooperative Planning Between Rehabilitation and Education. *Journal of Rehabilitation, 52*(2)

Techniques for improving the effectiveness of the Individualized Education Plan (IEP) as a management plan are presented in this article. The authors mentioned six specific strategies which included identifying appropriate vocational program goals, identifying potential employment opportunities, assessing present levels of vocational performance, translating program goals into performance objectives, identifying needed support services, and establishing evaluative criteria. The importance of a meaningful, working relationship between rehabilitation specialists and educators is stressed as it leads to improvement in the employability of persons with mental retardation. Educating All Students in the Mainstream of Regular Education

Methods for integrating special and regular education classes are based on the premise that the educational norm for all students is to be educated in the mainstream of regular education. The authors note that students cannot be truly mainstreamed without the integration of teachers' resources and the systems of special and regular education. The book is divided into six main sections: (1) an overview of educational integration; (2) educational equality in practice; (3) strategies to promote merger; (4) educational practices to meet diverse student needs; (5) family and community support; and (6) final considerations. Effective Mainstreaming: Creating Inclusive Classrooms (2nd Ed.)
Intended for use by educators in teaching mainstreaming, this text provides readers with numerous strategies for creating inclusive classrooms for all students. Utilizing a crosscultural orientation, the text establishes an effective mainstreaming model. A new chapter in this revised edition is devoted to modifying classroom behavior and the classroom environment. Also new to this edition is an introductory chapter that reviews current legislation and litigation concerning persons with disabilities. (618 pages, call for institution rates)

The Exceptional Student in the Regular Classroom (5th Ed.)
New York: Macmillan.

This book is designed for the preservice and inservice education of teachers who will be or are now teaching students with disabilities and students who are gifted and talented in regular classrooms. The first four chapters concentrate on information that is applicable for all exceptionalities such as legislation and effective instruction, while the remaining chapters examine eight specific exceptionalities individually. New features included are discussions on collaborative consultation and teacher assistance teams; how to handle students with health impairments, including students afflicted with HIV virus and students with behavioral disorders; and needs of the adolescent student. A Guide for Educating Mainstreamed Students (4th Ed.)
Needham Heights, MA: Allyn and Bacon.

A step-by-step approach for organizing and managing a school's special education program is provided in this guide. It supplies readers with current developments in learning theory, educational technology, and instructional alternatives. Included in the guide are practical tips, procedures, checklists, and worksheets. The twelve chapters address the following topics: (1) Disorders of Learning and Behavior; (2) Theoretical
Foundations; (3) Neurobiology of Learning; (4) Behavior Management; (5) Assessment: Rationale and Management; (6) Assessment Devices and Procedures; (7) Organization and Management for Instruction; (8) Language Development; (9) Language Arts: Reading, Spelling, and Written Language Expression; (10) Gross Motor-Body Image and Fine Motor Handwriting; (11) Mathematics and Arithmetic; and (12) Science, Social Studies, Study Skills, and Vocational Education. Helping Students Succeed in the Regular Classroom: A Guide for Developing Intervention Assistance Programs

School psychologists, guidance counselors, and other special services professionals can develop programs that allow teachers to help students with special needs in the regular classroom in order to avoid the costly and often ineffective process of placing those students in special education classes. Through intervention assistance programs, school psychologists, guidance counselors, and social workers consult with teachers to help students with mild learning or behavior problems function effectively in regular classrooms. Integrating Deaf Students into Technical Classes. School Shop, 47(7)
Skobjak, B. L., Till, R. J., & Raco, T. G. (1988, February).
Ann Arbor, MI: Prakken Publications.

This article provides insight for vocational/technical educators on how they can provide access in their classes for students who are deaf, as well as what educators should know about deafness. In addition, the article dispels many myths associated with deafness. The authors submit that utilizing a combination of communication and instructional strategies and further knowing students' characteristics contributes to the success of an accessible vocational/technical program for students who are deaf. Making Sense of Ability Grouping. *Instructor, 102*(9)
New York: Scholastic, Inc.

Grouping students by ability is one of the most common and controversial practices in education. This article discusses the challenge and methods of utilizing ability grouping in ways that will benefit all students. The author cites research conducted by Slavin which recommends the following ways to effectively use ability grouping in classrooms: (1) group students for only one or two subjects, with students remaining in heterogeneous classrooms for most of the day; (2) assign students to groups based on their demonstrated needs and abilities, not on IQ or previous performance; (3) group students for instruction only when it will help them learn new material; (4) use ability grouping to teach specific skills; (5) when grouping students, vary the level and pace of instruction to meet students' levels of readiness and understanding; and (6) reassess grouping assignments frequently. These techniques are offered to all educators to make sure ability grouping is properly being used to benefit all students in their classroom. (3 pages)

Seattle, WA: The Association for Persons with Severe Handicaps.

The McGill Action Planning System (MAPS) is a planning process that places primary emphasis on the integral involvement of learners with disabilities in the school community. This article provides readers with a detailed description of the MAPS process, including the structure used, content covered, and the underlying assumptions of the process. The MAPS process is one that capitalizes on utilizing nondisabled classmates, family members, and educational personnel in the planning of integrating students with disabilities into regular school life. An example of the MAPS process planning for an elementary student with severe disabilities is given. In addition, the article explains modifications to the given example for secondary age students. A section of the article details how the MAPS process complements the IEP process in at least two ways. (11 pages)

The Postsecondary Student with Learning Disabilities: Issues in Identification and Integration Manual  
Littleton, CO: Author.

The Colorado Community College Consortium for the Learning Disabled Project has published this manual for use in a staff development/personnel preparation course. The manual contains the definition and characteristics of a learning disability; local, state, and federal laws; socialization, emotional, and behavioral needs; implications of a learning disability on adult life; metacognitive strategies; and analysis and adaptation of instructional methods and materials.

The manual provides a list of required readings, approximate costs, participant objectives, a course outline, evaluation techniques, and sample handout and overhead materials. The course requires 30 contact hours and has been designed to be covered in ten, three-hour sessions. (500 pages; $60.00; due to a limited quantity, orders will be filled on a first-come-first-serve basis)

Support Networks for Inclusive Schooling: Interdependent Integrated Education  

Developing each student's talents and gifts to his or her fullest capability and empowering students to help others is the primary focus of this book. The book was written for administrators, educators, parents, students, and interested citizens to be used as a tool in the development of schools into inclusive communities. It is divided into three main sections: (1) inclusive schooling and support networks, (2) classroom-focused support options, and (3) the development of caring and supportive schools and communities. These sections detail strategies for implementing inclusive education, and how classrooms can teach children to respect one another and carry that respect over into the community. Transition from School to Work: The Alternative Cooperative Education Handbook
Fort Collins: Colorado State University, School of Occupational and Educational Studies.

The goal of Colorado's Alternative Cooperative Education (ACE) Program is to enhance the educational opportunities for special needs youth, maximize their abilities to live independently, and reduce their risk of dropping out. It is flexible and designed to serve both students with Individualized Education Plans and those that are economically disadvantaged. The program contains seven important elements: (1) vocational assessment, (2) educational planning process, (3) career and guidance advising, (4) occupational experiences, (5) transitional services, (6) curriculum, and (7) an advisory committee.

This manual, an extension of the Work Experience Resource Manual, provides information to individuals beginning or improving an ACE program. It describes the program history; the process used to design the manual; program components, curriculum, and resources; advice on applying for funding; and information on relevant legislation. A tool for evaluating program strengths and weaknesses is also provided. Appendices contain many useful forms, legislation abstracts, and articles. (218 pages; $25.00)

Alternative Uses of Ability Grouping: Can We Bring High-Quality Instruction to Low-Ability Classes?
Madison, WI: Center on Organization and Restructuring of Schools.

Findings of a study that investigated whether or not ability grouping can be implemented more effectively are presented in this paper, with a focus on exploring possible instances of high-quality instruction in low-ability classes. Methodology involved observation, teacher questionnaires, and interviews of eighth- and ninth-grade English classes in 25 midwestern schools. The two schools that exhibited effective instruction in low-track classes were Catholic schools, which in general are characterized by an ethos of caring, academic rigor, and seriousness of purpose. Findings indicate that variability exists in the implementation of student grouping and that such differences are tied to student outcomes. Examples of effective uses of ability grouping for students in low-ranked classes in the two Catholic schools are presented. The two cases are characterized by: (1) high expectations by teachers; (2) extra exertion by teachers to foster extensive oral classroom discourse; and (3) no system for assigning weak or inexperienced teachers to lower tracks. A limitation of the study is that Catholic students tend to come from more economically advantaged backgrounds. (24 pages, ERIC Document Reproduction Service No. ED 351 808, cost varies by document)

Child Language Disability (Volume III)
Bristol, PA: Multilingual Matters Ltd.

Hearing impairment, whether mild and transient or lifelong and severe, can potentially undermine a child's learning because successful communication is at the heart of the educational process. This book provides information that mainstream teachers and support teachers can utilize in adjusting classroom practice to the specific needs of hearing-impaired children. It is also for speech and language therapists involved in the management of hearing-impaired children in both mainstream and special provision. Topics discussed include
practices and provisions for hearing impaired children, different types of hearing loss, implications of hearing impairment for social and language development, acoustics considerations for hearing-impaired children, educational management of hearing-impaired children in mainstream schools, and speech and language therapy support of hearing-impaired children in an integrated educational setting. A list of organizations that can offer specialist help and/or advice is included. (68 pages, $21.00)

Curriculum Adaptation for Inclusive Classrooms
Sacramento, CA: PEERS Project.

This manual on curriculum adaptation for inclusive classrooms was developed as a collaborative effort between the California Research Institute and the Systems Change Projects in California and Colorado. Information in the manual reflects information offered by practicing full-inclusion sites. The goal of the manual was to make this information accessible to parents, teachers, special support personnel, and administrators so they can support programs that are developing inclusive schools in their communities and states. The manual is divided into six main sections: (1) an introduction; (2) service delivery models for inclusive education; (3) building-level support and strategies; (4) classroom-based strategies; (5) student-specific strategies; and (6) closing. Three appendices include National Full Inclusion Site Network, PEERS Project Inclusive Education Guidelines, and Individualized Program Development Forms. (182 pages, ERIC Document Reproduction Service No. ED 358 637, cost varies by document)

Both general and special education are at a critical crossroad for determining what schools should do for all students. This article discusses a curriculum design to be applied in inclusive school communities. The authors state that an inclusive school community is one in which all members of the community--adults and children belong. In an inclusive school community, all members can support one another and maximize individual
The authors suggest the following process of curriculum development for inclusive classrooms: (1) planning the transition; (2) taking the plunge... determining needs in context; (3) envisioning a desirable future; and (4) bringing it together and moving forward... one class at a time. The article concluded with a challenge for all educators and community members to break out of old paradigms and, in turn, provide the best teaching-learning experience possible for all students. Integration/Inclusion Needs Assessment (Rev. Ed.)
Sacramento, CA: PEERS Project.

The PEERS (Providing Education for Everyone In Regular Schools) Project—a California project to integrate students with severe disabilities who were previously at special centers into services at regular school sites and students who were in special classes in regular schools into general education—developed this needs assessment instrument. The first section of the needs assessment is for use with local education agencies (LEAs) that have developed a written plan for integration/inclusion transitions. It is intended to help evaluate plan components in the following areas: least restrictive environment policy, student placement, physical plant availability and selection, accessibility criteria, staff assignments, administrative roles/ responsibilities, interagency and/or inclusion, and facilitation of peer interactions. Section two is designed to assist in identifying the history and goals of the LEA in regard to attitudes toward integration and inclusion; existing resources to support transitions; space concerns within accessible schools; personnel role changes; site preparation needs; and parent reactions to the integration/inclusion plan. The third section is intended for on-site review and covers environmental considerations, school climate, special education teacher integration, general education classroom environment, student integration, and the curricular and instructional model. (38 pages, ERIC Document Reproduction Service No. ED 358 634, cost varies by document)

Practical Considerations in the Use of Technology to Facilitate the Inclusion of Students with Severe Disabilities. *Technology and Disability*, 3(2)
For students with severe disabilities, inclusion in the regular classroom requires physical accommodation, curricular accommodation, and communication enhancements. This article reviews a study completed with 28 teachers of students with severe disabilities with the intent to assess the outcome of technology use by students with severe disabilities. The teachers reported student use of technology in the classroom and the barriers to effective use of technology. Barriers mentioned included complexity and lack of familiarity with technology, equipment breakdown, early abandonment, student interaction with others only at site of the technology, cost of specialty items, necessity of the student being located near power outlets or often needing battery changes, students using technology to interrupt or act out, and individual education programs lacking curricular objectives related to learning or using technology. The authors suggest some procedures for minimizing or overcoming barriers to technology use for students with severe disabilities. (10 pages)

The Role of the Classroom Teacher as a Curriculum Leader. *NASSP Bulletin*, 76(547)

Although teachers have little voice in textbook selection or standardized test content, they still retain the most powerful influence on students' learning and can serve as curriculum leaders. The author of this article examined the role of the classroom teacher as this curriculum leader. Many past analyses of the classroom teacher's role in curriculum development have made the following mistakes: (1) defining curriculum too broadly, (2) defining curriculum development as an authoritarian administrative process, (3) claiming curriculum development to be a local activity without support, (4) defining classroom teachers as "merely" implementers, (5) defining the teacher as a crusader, and (6) defining the teacher as someone in need of motivation rather than opportunity. The author feels that classroom teachers need to be viewed as part of the solution, not as part of the problem. It was proposed that classroom teachers, as curriculum leaders, focus on three areas: (1) detracking, (2) real teaching, and (3) making Americans. (9 pages)

This book addresses the diverse learning and behavior needs of special students and offers practical suggestions for correcting problems in structuring, managing, and enhancing the instruction of these students. A handy and comprehensive resource guide on mainstreaming, it includes the detection of 101 special needs and more than 1,000 corrective strategies. It is divided into three major parts, which provide a positive overview and understanding of the detection and correction process. Ultimately, the book is intended to increase the achievement of special needs students in both regular and special education classrooms. (478 pages, $39.95)

PUBLICATIONS

Comprehensive Support Services

The Comprehensive Local School: Regular Education for All Students with Disabilities

The comprehensive local school (CLS) model is based on the belief that no student is so severely disabled that a free, appropriate public education cannot be delivered at the local school—the same school the child would have attended if he or she had no disabilities. This book describes the five phases of this model that help promote the development of unified, comprehensive educational delivery that is consistent with federal policies and extends benefits from preschool through high school and beyond for students with disabilities. The five phases of the CLS model are as follows: (1) mainstreaming young children with disabilities; (2) integrated educational services in the elementary school years; (3) community intensive instruction in the intermediate and middle school years; (4) transition from school to work and community service; and (5) the postschool years: integrated support work and community living. Creating Individual Supports for People with Developmental Disabilities: A Mandate for Change at Many Levels

The vision of inclusion must move beyond rhetoric and become a reality for people with disabilities in the United States. This book is for policymakers, systems administrators, program developers, service coordinators and providers, social workers, advocates, consumers, and others committed to interdependence and inclusion in the community of all people with disabilities. It attempts to capture the major steps necessary to bring about systemic changes, including the continuing reconfiguration and reshaping of the legal and regulatory superstructure that governs the provision of services as well as the development of new service delivery and administrative strategies to enable individuals with disabilities to thrive as active members of their communities. It offers insights into designing community support at the individual, agency, local, state, and regional levels; and presents in-depth case studies on successful transformations across the nation. The School Counselor and Comprehensive Programs for Work-Bound Youth

The commitment of the American Counseling Association is to the career development of all children and young adults—including the noncollege-bound. This paper presents comprehensive programs that address the career and occupational needs of work-bound students. In addition, it discusses the multiple roles of school counselors in implementing effective, comprehensive programs. The American Counseling Association suggests that career counseling be part of five needed programs combining vocational education with traditional academics: (1) cooperative education, (2) apprenticeships, (3) internships, (4) pre-employment training, and (5) youth-operated enterprises. Vocational Counseling for Special Populations
This book is meant to enhance and clarify vocational issues for vocational counselors of nontraditional clients. Nontraditional clients include the following special populations groups: (1) displaced homemakers, (2) veterans, (3) women in competitive market, (4) older workers, (5) persons with disabilities, and (6) disadvantaged workers. Each chapter ends with review questions and references. Five case histories of clients with special needs are presented at the end of Chapter 5. The last chapter on supported employment (Chapter 7) is an important one for counselors in the 1990s because supported employment will often be the vocational outcome for special populations, especially for individuals with severe disabilities. Perspectives in Education and Deafness
This journal is published bimonthly throughout the school year. Most articles are contributed by teachers or other school personnel. The journal recognizes parents as the first and most influential teacher of their children. Articles are experience-based in support of family communication, emotional growth, and the development of every child to his or her highest potential. The journal addresses issues such as setting up and maintaining viable mainstream programs; teaching love of language and the joy of reading; finding practical, dynamic approaches to the teaching of math and science; helping families create a supportive learning environment for deaf toddlers; and guiding teenagers to self-esteem through genuine academic and social achievement. In addition, articles include successful teaching strategies, current issues in deafness, and creative ideas for family and community activities. The Arc
The Arc (formerly the Association for Retarded Citizens) is a national membership organization committed to securing for all people with mental retardation the opportunity to choose and realize their goals of where and how they learn, live, work, and play. It is committed to reducing the incidence and limiting the consequence of mental retardation through education; research; advocacy; and the support of family, friends, and community.

Some of The Arc's current activities include an annual nationwide television, radio, and print media campaign to educate the public about people with mental retardation; a national job placement service to assist workers with mental retardation to obtain and retain jobs in competitive employment; and research on applying technologies in new ways to help children and adults with mental retardation to achieve greater independence. In addition, The Arc works through education in cooperation with other national groups to promote prevention programs. Citizen advocacy and self-advocacy programs, recreational activities, public education efforts, and employment programs also are available through many local chapters. More than 100 publications dealing with research, employment, prevention, and parenting issues are available through The Arc. Members receive The Arc Today, the Association's national newspaper, six times a year.

Association for Supervision and Curriculum Development
Association for Supervision and Curriculum Development (ASCD) is the largest professional leadership organization in education. The 112,000 members form a broad cross section of instructional leaders in all 50 states and several other countries. A third of ASCD's members are principals and the rest are equally divided among other leadership roles, including curriculum directors, superintendents, teachers and professors. ASCD was founded in 1943 and continues to seek to improve education by increasing leaders' knowledge and skills in the areas of curriculum development, supervision, and instruction through publications, conferences, institutes, research, and with ASCD's affiliate units. ASCD supports a balanced curriculum and instruction that enables all students in a diverse society to learn successfully.

Center for Success in Learning
The Center for Success in Learning (CSL) is a nonprofit resource center for teachers of slower learners (general IQ 70-89) who do not learn typically or easily. The purpose of the CSL is to ensure that slower learners and other students at risk have the opportunities to develop educational, social, and independent living skills so they are prepared to participate in society as contributing, self-sufficient citizens. CSL's goal is to provide teachers, instructional leaders, and parents with "what works"—the latest in research and application for slower learners and other students at risk through conferences, workshop training, state and national conferences, and educational resources. Information packets, articles, and products are available for educators and parents.

Closing the Gap

Closing the Gap is an internationally recognized source for information on the use of microcomputer-related technology by and for exceptional individuals. It is committed to providing the most up-to-date information on commercially available hardware and software products that can enable individuals with disabilities access to the microcomputer—and to the opportunities for education and independent living that it offers. Closing the Gap has developed three primary information delivery methods: (1) a bimonthly newspaper, (2) training and consultation services, and (3) an annual international conference. Their annual publication, *Closing the Gap Resource Directory*, contains a comprehensive listing of commercially available hardware and software products identified as appropriate for special education and rehabilitation.

Council for Exceptional Children

The Council for Exceptional Children (CEC) is an organization dedicated to improving the quality of education for all exceptional children who are disabled and gifted. Special divisions within the organization focus on the education of gifted, mentally retarded, learning disabled, visually impaired, communication impaired, physically disabled, and behavior disordered students. Other divisions serve the interests of early childhood special educators; administrators; teacher educators; students; diagnosticians; and those especially interested in technology, career education, and research.

CEC's commitment encompasses four major priority areas: (1) advancing the education of exceptional persons by improving access to special education for underserved or inappropriately served populations and by extending special education to children who could benefit from, but are not now considered entitled to such services; (2) improving the conditions under which professionals work with exceptional persons through the establishment of professional standards of practice and a code of ethics for all professionals involved in the education of exceptional persons; (3) improving the quality of instruction provided to exceptional persons by supporting the development and dissemination of new knowledge, technology, methodology, curriculum, and materials on a worldwide basis; and (4) advancing the CEC by enhancing communication between the organization and its individual members, units, and other organizations involved with exceptional persons. CEC is the host organization for several projects important to the education field, including the ERIC Clearinghouse on Handicapped and Gifted Children and the National Clearinghouse for Professions in Special Education.

Council of Chief State School Officers
Council of Chief State School Officers (CCSSO) is a nationwide, nonprofit organization of the 57 public officials who head departments of elementary and secondary education in every state, five U.S. extra-state jurisdictions, the District of Columbia, and the U.S. Department of Defense Dependents' Schools. CCSSO seeks its members' consensus on major education issues and expresses their views to civic and professional organizations, federal agencies, Congress, and the public.

The Council maintains a Resource Center on Educational Equity which provides services designed to achieve equity in education for minorities, women and girls, and for students who are disabled, limited English proficient (LEP), and economically disadvantaged. CCSSO's staff provides technical assistance in policy formulation, develops programs and materials, gives technical assistance in workshop planning and other services needed by state education agencies, holds working conferences, monitors civil rights issues, and trains local on-site trainers to increase the dimensions of this work. CCSSO also publishes a quarterly newsletter, CONCERNS.

CCSSO is responsible for managing and staffing a variety of leadership initiatives to provide better educational services to children and youth at risk of school failure. It conducts projects on topics such as dropout prevention, improving educational services to LEP students, increasing the participation of female and minority students in mathematics and social studies, transition programs for disabled youth, school-sanctioned community service, educational equity for juvenile female offenders, and AIDS education.

ERIC Clearinghouse on Disabilities and Gifted Education
The ERIC Clearinghouse on Disabilities and Gifted Education, operated by the Council for Exceptional Children (CEC), gathers and disseminates educational information on all disabilities and the gifted across all age levels. The areas included in its scope concern all aspects of the education and development of people who are disabled and gifted, including prevention, identification and assessment, intervention, and enrichment, both in special settings and within the mainstream. The Clearinghouse abstracts and indexes the special education literature included in the computerized ERIC database and its monthly print indexes, Resources in Education (RIE) and Current Index to Journals in Education (CIJE). Services include workshops and technical assistance; computer searches of the ERIC and Exceptional Child Education Resources (ECER) databases; and analyses of current trends and issues.

GED Testing Service
For adults who did not complete high school, the GED tests (tests of General Educational Development) provide an opportunity to earn a high school credential. Sponsored by the American Council on Education, the GED program enables individuals to demonstrate that they have acquired a level of learning comparable to that of high school graduates. The service includes special accommodations for candidates with specific disabling conditions, including learning disabilities, with appropriate documentation. The Testing Service provides information about special testing for people with disabilities to interested individuals who would like to take the GED tests and to those people who are helping prepare individuals for the GED tests.

HEATH Resource Center
The HEATH Resource Center operates the national clearinghouse on postsecondary education for individuals with disabilities. The Center serves as an information exchange about educational support services, policies, procedures, adaptations, and opportunities on American campuses, vocational-technical schools, transition training and adult education programs, independent living centers, and other training entities which serve youth and adults beyond high school. The Center gathers and disseminates this information so that people with disabilities can develop their full potential through postsecondary education and training if they choose to do so. The Center provides technical assistance to colleges, universities, and postsecondary programs to help them include students with disabilities. HEATH maintains a toll-free number, provides single copies of materials free of charge in print or through alternative media, and encourages duplication and dissemination of its resources. HEATH disseminates the Information from HEATH newsletter, which is also free of charge. A list of publications is available upon request.

National Center on Educational Outcomes
The mission of the National Center on Educational Outcomes (NCEO) is to provide national leadership in the identification of educational outcomes for students with disabilities and in the development of a system of indicators with which to monitor those outcomes. NCEO is working with national policy-making groups, state departments of education, and other groups and individuals to promote national discussion of educational goals and indicators of educational outcomes that include students with disabilities. They publish a biannual newsletter and a variety of reports.

National Federation of the Blind

National Federation of the Blind (NFB) is a consumer group which can answer questions about blindness and refer people to appropriate resources or adapted equipment. The ultimate purpose of the NFB is the complete integration of the blind into society on a basis of equality. This objective involves the removal of legal, economic, and social discriminations; the education of the public to new concepts concerning blindness; and the achievement by all blind people of the right to exercise to the fullest their individual talents and capacities. NFB publishes *The Braille Monitor*, a monthly publication devoted to news and discussion of issues important to blind people. It is produced in print, Braille, on record, and on cassettes and is available without cost to the blind and the sighted alike upon request.

National Information Center for Children and Youth with Disabilities

National Information Center for Children and Youth with Disabilities (NICHCY) operates as a national clearinghouse to provide free information to assist parents, educators, caregivers, advocates, and others to improve the lives of children and youth with disabilities and to assist them in becoming participating members of the community. NICHCY collects and shares information and ideas that are helpful to children and youth with disabilities and the people who care for and about them. NICHCY answers questions, links people with others who share common concerns, provides technical assistance, publishes information products, and uses visual media to inform. Essentially, NICHCY helps information flow between the people who have it and those who need it. Publications on current issues available at no charge from NICHCY include three *News Digests* per year, one *Transition Summary* per year, briefing papers, fact sheets, and state resource sheets. A list of free publications is available upon request.

National Rehabilitation Information Center

National Rehabilitation Information Center (NARIC) provides reference, research, and referral services concerning disability and rehabilitation issues. NARIC also provides document delivery and custom database searches of REHABDATA, their database, and other databases available through the Center, and maintains an extensive research collection. It publishes the NARIC Quarterly: A Newsletter of Disability and Rehabilitation Research and Resources. In addition, other publications which accommodate a broad range of information seekers—from the practical to the technical—are made available. NARIC's staff encourages telephone or mail requests, as well as walk-in visits to access resources in NARIC's extensive library.

National Technical Institute for the Deaf

National Technical Institute for the Deaf (NTID), one of the Rochester Institute of Technology's (RIT's) nine colleges, is the world's largest technological college for deaf students. Created by Congress and funded primarily by the U.S. Department of Education, NTID represents the world's first effort to educate large numbers of deaf students within a college campus planned principally for hearing students. In addition to the academic programs based within NTID, RIT's deaf students also benefit from nearly 200 other technical and professional courses of study offered by RIT's other eight colleges. NTID offers deaf students the opportunity to go to college in a hearing environment and thus makes their transition to a hearing society easier and more effective.

Parent Advocacy Coalition for Educational Rights

Parent Advocacy Coalition for Educational Rights (PACER), a coalition of twenty Minnesota disability organizations, is a center of parents helping parents. Staffed primarily by parents of children with disabilities, or by persons with disabilities themselves, PACER offers information about laws, procedures, and parents' rights and responsibilities. PACER works with parents of children and young persons with all disabilities—physical,
mental, learning, and emotional. PACER's programs help parents become informed and effective representatives for their children in educational, vocational and other decision-making settings. PACER offers transition workshops for parents of secondary school students with disabilities as well as transition training for special education students in high school settings. PACER publishes the following newsletters: the PACESETTER, the ADVOCATE, and the Early Childhood CONNECTION. A complete catalog of PACER publications is available upon request.

Programs for Educational Opportunity
Programs for Educational Opportunity (PEO) is the combined Race, Gender, and National Origin Desegregation Assistance Center (DAC), based at the University of Michigan, funded under Title IV of the 1964 Civil Rights Act, since 1970. PEO is guided by the philosophy that all children deserve a quality education and that this education involves equal access to educational programs and activities, equal chances for academic achievement, fair treatment in formal policies and school environment, and equitable rewards and outcomes. PEO works collaboratively and without charge with public school districts in Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin to achieve an equitable and quality education for their students. Activities provided by PEO include equity-related needs in assessment, planning, training, and consultative services. In addition, it disseminates equity-related publications and bibliographies. Staffs include educational equity professionals and a consultant pool of current practitioners and experts in a wide range of equity areas. PEO has provided information services to over three thousand school districts, and in-depth technical assistance to over three hundred school districts.

Project RETAIN: Retention in Education Technical Assistance and Information Network
Project RETAIN Is designed to identify promising practices that (1) prepare students with mild disabilities for postsecondary employment/education and (2) reduce the number of students with mild disabilities who leave
school prior to graduation. The project is funded by the Florida Department of Education, Bureau of Education for Exceptional Students and is coordinated through Florida Network. Promising practices were determined by the (1) expansion of an existing statewide effective transition practices database to include components specific to dropout prevention, (2) identification of promising practices in drop-out prevention and criteria for measuring these practices, and (3) identification of programs that exemplify promising practices in dropout prevention. Project RETAIN is designed to meet the technical assistance needs of school personnel, families, and service providers in the replication of the identified promising practices.

Support Center for Educational Equity for Young Mothers
The Support Center was established to serve as a resource to policymakers, practitioners, and service providers working to improve educational opportunities for women who began childbearing before graduating from high school. Staff at the Support Center conduct research, produce reports, provide training, and offer technical assistance. The Support Center is a project of the School and Community Services division of the Academy for Educational Development. This division is committed to the notion of educational reform that stresses both excellence and equity. Much of its work focuses on four primary objectives: improving the access of poor youth to educationally sound programs, reducing school dropout rates, preventing adolescent pregnancy, and improving school-to-work transition.

U.S. Department of Education, Office of Special Education and Rehabilitative Services
The Office of Special Education and Rehabilitative Services (OSERS) supports programs that assist in educating
children with special needs, provides for the rehabilitation of youth and adults with disabilities, and supports research to improve the lives of individuals with disabilities. Within the U.S. Department of Education, OSERS is one of thirteen offices, each of which plays a specific role in carrying out the Department's mission.

OSERS directs, coordinates, and recommends policy for special education programs and services designed to meet the needs of individuals with disabilities and to help them develop their full potential. Some programs administered by OSERS are designed to reduce dependency and to encourage the productive capabilities of persons who are disabled by providing independent living and vocational rehabilitation services. OSERS also administers funds for rehabilitation and special education research; for demonstration projects to foster knowledge, innovation, and improvement of services for persons who are disabled; and for dissemination of information about services, programs, and laws affecting individuals with disabilities.

OSERS is divided into three program areas: the Office of Special Education Programs, the Rehabilitation Services Administration, and the National Institute on Disability and Rehabilitation Research.

The OSERS Magazine reports on the latest initiatives and projects that OSERS is funding. It is published quarterly and is available at no charge. To request information relating to disability research, legislation, or services, write or call the OSERS Information and Coordination Staff.

EXEMPLARY PROGRAMS AND PRACTICES

ERIC/OSEP Special Project
Funded by a contract with the Office of Special Education Programs (OSEP) of the U.S. Department of Education, the ERIC/OSEP Special Project is operated by The Council for Exceptional Children, through the ERIC Clearinghouse on Disabilities and Gifted Education. The Special Project performs two major functions: (1) to facilitate communication among researchers sponsored by OSEP and (2) to disseminate information about special education research to audiences involved in the development and delivery of special education services. Among these audiences are policymakers, teachers, administrators, and researchers. Special Project activities encompass tracking current research, planning and coordinating research conferences, and developing a variety of publications that synthesize or summarize recent research on critical issues and topics. Specific activities include an annual conference for research project directors, research forums, development of a series of oral histories of leaders in special education, and maintenance of databases containing ongoing research projects. The
Special Project publishes the following products available to the public at minimal cost: annual directories of current research projects, research and resources on special education topical papers, research briefs for teachers, and Issue Briefs.

Pierce County Vocational/Special Education Cooperative
As a demonstration project, the Cooperative provides a model that confederations of school districts can use to capitalize on their own unique resources within the realms of vocational and special education to prepare mildly handicapped high school students for employment and/or postsecondary vocational training. A regional cooperative is established to provide data collection, staff development, and support services to the member districts. It also assists in developing and implementing effective, results-oriented process models. The Cooperative operates on the premise that mildly handicapped learners are better prepared for the working world when vocational and special educators systematically coordinate and consolidate their expertise. The Cooperative has demonstrated success in enhancing the rate and quality of employment and enrollment in postsecondary education for the targeted population. Awareness materials are available at minimal or no cost.

Project ADAPT
Central to the Project ADAPT service delivery model is the concept of achieving student outcomes through changing the way that teachers teach and the way that students learn. This program provides a comprehensive service delivery model for secondary and postsecondary students who are learning disabled. The program increases the number of students receiving full-time service in the educational mainstream, reduces the dropout rate of students who are learning disabled, and improves their basic academic skills. Project ADAPT augments a school's existing LD service delivery system, improving the structure by increasing knowledge, skills, awareness, communication, and coordination. Three key areas for teacher adaptation are addressed: (1) teaching skills, (2) curricula and materials, and (3) collaboration. The project training process instructs teachers in using alternative organization, management, practice, presentation, and assessment techniques to adapt the regular classroom environment for the student with learning disabilities. All teachers learn to assess their curricula and
teaching materials for appropriateness. Student adaptation is facilitated by the resource teacher through re-teaching and adaptive skill instruction. The goals are to remediate basic skill deficiency and equip learners with skills that will transfer to the regular classroom and to the world of work. Twenty-two percent of the students were mainstreamed on a full-time basis after one year in the project, 43% after two years (compared to a national average of 15%). Awareness materials are available at no cost. Awareness sessions, implementation, and follow-up services are available at a fee.

Project Partnerships
Project Partnerships provides 14- to 21-year-old high school students with severe disabilities the opportunity to develop the skills necessary to make the transition from school to work. Through the collaborative efforts of the New Hampshire Job Training Council, the Division of Vocational Rehabilitation, the Bureau of Special Education, the Bureau of Vocational-Technical Education, the Developmental Disabilities Council, the Division of Mental Health and Developmental Services, and local school systems, the program seeks to provide all students with severe disabilities the educational, vocational, and community-related tools they will need to excel in school and to secure employment upon graduation. The program has facilitated collaboration among public agencies and local school systems to meet the needs of severely disabled students. It has identified employers interested in providing training experience and competitive employment to severely disabled students and provided access to vocational-technical education programs.

Skills and Academics Grant Education
A joint venture between the Metro Area Vocational-Technical School District and Oklahoma City Schools since 1981, Skills and Academics Grant Education (SAGE) has served as an alternative high school for students classified as at-risk of not graduating from high school. In 1990, this cooperative effort was awarded the Governor's Excellence Award. SAGE is designed to integrate general education and vocational training to assist students in recognizing the relationship between academics and the world of work.
This unique school offers both vocational and academic programs. The seven vocational programs are (1) Auto Service Technology, (2) Business Technology, (3) Building Maintenance, (4) Carpentry, (5) Distributive Education/Marketing, (6) Motorcycle Technology, and (7) Welding. Academic programs offered include Mathematics, Language Arts, Science, and Social Studies. In addition, a Learning Resource Center is available for remedial support in reading and math. All classes use individualized instructional methods with maximum student-to-teacher ratios of fourteen to one. Students are referred to SAGE from the seven Oklahoma City district high schools. Support services available include nontraditional career counseling.

SELECTED STATEWIDE SYSTEMS CHANGE PROJECTS

Kansas

Kansas State-Wide Systems Change Project
The purpose of this project is to increase the capacity of the state to ensure that children and youth with severe disabilities, including deaf-blindness, achieve their highest outcomes in normalized, nonsegregated, least restrictive settings. At the state level, the project will improve the current delivery of educational services by revising policies, monitoring procedures and legislation, and developing interagency agreements to support collaborative delivery of services for children and youth. The project will focus on development of five regional support team coordinators, five regional support teams, training modules, and three model internship sites. Regional support teams will train local staff within model districts. Inservice modules will be utilized to empower parents, staff, and administration with skills in effective practices, instructional leadership, collaborative instruction, and futures planning. Training will consist of site visitations, summer institutes, consultations, teacher exchanges, interactive television, and internships.

Maryland

Maryland Least Restrictive Environment/ Neighborhood Inclusion Project
The purpose of this project will extend the commitment of the Maryland State Department of Education to improve the quality of special education services to students with disabilities and to change the delivery of those services from segregated to integrated settings. This project aims to establish model quality inclusive programs for students with severe disabilities in 16 local education agencies (LEAs) at the elementary, middle, and high school levels. To achieve this goal, several approaches will be used: training and consultation will be provided; information and support will be offered to families; certification standards and personnel preparation practices will be reviewed and modified; coordinated procedures and practices will be developed to promote the inclusion of students with disabilities in their home schools and communities; and information will be disseminated on inclusion, and on project activities, procedures, and outcomes.

Systems Change for Inclusive Education in Michigan
This project will provide intensive statewide training and technical assistance to schools, including policy analysis and development, leadership development, and related activities. The project will facilitate the integration of students with disabilities into regular schools as part of a statewide effort to make schools more effective for all youth. Planned activities to be conducted will include information gathering, needs assessment, policy recommendation, work with twenty school districts, training and technical assistance, leadership development via a summer institute and regional support meetings, parent and advocacy support, establishment of an inclusive education support network, materials development, and the development of a consortium for integration and transition.

Together We're Better: Inclusive School Communities in Minnesota--Partnerships for Change
The specific goals of this project are closely linked with current and projected statewide efforts in Minnesota. The project's purpose is to promote inclusion of children with severe disabilities in the schools the children would attend if they did not have disabilities. The objectives and practices of the project emphasize (1) the linkage of inclusion with current restructuring initiatives and best practices in general education; (2) collaboration with local school districts already taking leadership roles in inclusive education; (3) preservice personnel development in inclusive education; (4) staff development and ongoing information dissemination to local school agencies; (5) leadership training for families of children with severe disabilities; and (6) comprehensive evaluation and dissemination efforts.

New York

New York Partnership for Statewide Systems Change
The purpose of this project is to increase quality inclusive education program options, significantly increase the numbers of students with severe disabilities served in their home schools and regular classrooms (including deaf/blind), increase quality and frequency of meaningful interactions, revise and adapt innovative curricula and instructional strategies, evaluate the effectiveness of project activities, and disseminate effective systems change processes. The approach will include the application of a partnership model involving collaboration between the New York State Education Department, Syracuse University, and agencies responsible for the delivery of educational services and teacher education. Other approaches will include intensive inservice training, technical assistance activities, and materials development and dissemination.

Pennsylvania

Statewide Systems Change: Gateways Model for Integration
This project will facilitate the development of quality programs in integrated environments and thereby improve the acceptance of students with severe disabilities by the general public, professionals, and future employers. Project personnel will implement a systematic statewide effort in assisting school districts, intermediate units, area vocational technical schools, and community agencies to develop, implement, evaluate, and improve the quality of their integration programs. Practices that this project will use include community integration, community-based instruction, nonaversive behavior intervention, transition planning and training, and family involvement.

Statewide Systems Change
This project will improve the quality of special education and related services for students with severe and multiple disabilities; establish policy and administrative support for statewide systems change activities; significantly increase the number of students with severe disabilities taught in age-appropriate regular schools while increasing the number and quality of interactions with nondisabled peers; increase appropriateness and effectiveness of instruction by regular special educators teaching students with severe disabilities by establishing model demonstration schools for inservice training; disseminate the project to all interested educators; and evaluate the effectiveness of the model and its components throughout the state.

NNCCVTE CURRICULUM COORDINATION CENTERS

Six Curriculum Coordination Centers comprise the National Network for Curriculum Coordination in Vocational and Technical Education (NNCCVTE), sponsored by the U.S. Department of Education, Office of Vocational and Adult Education. The network promotes the sharing of curriculum, the professional development of local and state educators, research in curriculum design and methodology, and coordination of development among states.

East Central Curriculum Coordination Center
States served are Delaware, District of Columbia, Illinois, Indiana, Maryland, Michigan, Minnesota, Ohio, Pennsylvania, Virginia, West Virginia, and Wisconsin.

Western Curriculum Coordination Center
States and regions served are American Samoa, Arizona, California, Commonwealth of the Northern Marianas,
The following curriculum centers offer free research, referral, and resource services to vocational education administrators in their state. Their resource centers' staff respond to requests in all vocational subject areas, including agriculture, business/distributive education, health, home economics, special needs, cooperative education, industrial arts, plus the vocational education concerns of gender equity and guidance. Specific services available from the centers may vary, but generally include workshops in curriculum development and use, reprinting/production, and the dissemination of curriculum and instructional materials.

This section contains a current list of curriculum centers that responded to the Office of Special Populations (OSP) update request by mid-September 1994. For any changes, updates, and other additional information, please contact the OSP office.
