College Affordability in SREB States: 2019 Technical Guide

Susan Campbell Lounsbury, Director
Christiana Datubo-Brown, Research Associate
Educational Data Services
Southern Regional Education Board

Updated: January 2020
**Introduction**

The state and regional affordability profiles were first released in 2016 as part of SREB’s initiative on college affordability and in support of SREB’s Commission on College Affordability. The profiles have been updated annually and modified somewhat each year to maintain currency.

The original guide was developed by Dr. William Doyle, associate professor, Public Policy and Higher Education, Vanderbilt University, and Dr. Darcie Harvey, senior policy analyst, Higher Education Policy Institute. The 2019 technical guide was updated by SREB’s Education Data Services staff, Dr. Susan Lounsbury, director, and Christiana Datubo-Brown, research associate.

This technical guide includes descriptions of each data indicator in the SREB report for each state. Each description includes the following information:

- **Sources**: Where the raw data used to calculate the indicator can be found
- **Description**: Definition of the indicator
- **Notes**: Includes a detailed methodology section for those indicators that require additional explanation
- **Availability**: How to find the data used to calculate the indicator

It is our intent that the analysis undertaken to determine college affordability in any SREB state report can be replicated by others. Please contact us with questions or clarifications.
**Net Price as a Percent of Income**

**Description**

Family ability to pay is defined as the ratio of net price (after grant aid is deducted) to family income. These calculations are conducted by family income level, then averaged across family incomes for the final figure reported. Sources and definitions for each are defined below.

- Numerator: Net price for students in each sector
- Denominator: Family income

**Notes**

The descriptions below cover data and methods for both the overall ability to pay measures and the tables in each state profile.
Net Price

Net price data is taken from the IPEDS student financial aid survey, completed by all Title IV eligible institutions. National Center for Education Statistics defines net price for students as follows:

IPEDS calculates the average net price for full-time, first-time degree/certificate-seeking undergraduates paying the in-state or in-district tuition rate who received Title IV federal student aid by income level. Title IV federal student aid includes federal grants, federal student loans, and/or Federal Work Study. IPEDS uses the following categories of income levels: $0-30,000, $30,001-48,000, $48,001-75,000, $75,001-110,000, and $110,001 and more.

Average net price is generated by subtracting the average amount of federal, state/local government, or institutional grant and scholarship aid from the total cost of attendance. Total cost of attendance is the sum of published tuition and required fees (lower of in-district or in-state), books and supplies, and the weighted average room and board and other expenses.

The weighted average for room and board and other expenses is generated as follows:

\[
\frac{(\text{cost of on-campus room, board and other expenses} \times \text{number of students living on-campus})}{\text{total number of first-time, full-time degree and certificate seeking students}} + \left(\text{cost for off-campus (with family) room, board and other expenses} \times \text{number of students living off-campus with family}\right) + \left(\text{cost for off-campus (not with family) room, board and other expenses} \times \text{number of students living off-campus not with family}\right)
\]

Students whose living arrangements are unknown are excluded from the calculation. For some institutions, the number of students by living arrangement will be known, but dollar amounts will not. In this case, the number of students with no corresponding dollar amount will be excluded from the denominator.

This data file includes public institutions with standard academic calendars (semester, quarter, trimester, 4-1-4) that report financial aid data for students enrolled for the fall term who received aid any time during the full aid year.

Title IV aid to students includes grant aid, work study aid, and loan aid: Federal Pell Grant, Federal Supplemental Educational Opportunity Grant, Academic Competitiveness Grant, National Science and Mathematics Access to Retain Talent Grant (SMART), Teacher Education Assistance for College and Higher Education Grant (TEACH), Federal Work-Study, Federal Perkins Loan, Subsidized Direct or FFEL Stafford Loan, and Unsubsidized Direct or FFEL Stafford Loan.
Full-time, first-time degree/certificate-seeking undergraduates include students enrolled in a four- or five-year bachelor's degree program, an associate degree program, or a vocational or technical program below the baccalaureate level who have no prior postsecondary experience and are enrolled for 12 or more semester credits, or 12 or more quarter credits, or 24 or more contact hours a week each term.

In-state tuition is the tuition charged by institutions to students who meet the state's or institution's residency requirements. In-district tuition is the tuition charged by the institution to students residing in the locality in which they attend school and may be a lower rate than in-state tuition if offered by the institution.

Source: IPEDS Student financial aid data dictionary. The variables used are: NPIS412, NPIS422, NPIS432, NPIS442, and NPIS452 for public institutions. Source Document: http://nces.ed.gov/ipeds/datacenter/data/SFA1617_Dict.zip

For more information on net price, see the IPEDS FAQ on net price: https://nces.ed.gov/ipeds/Section/Institutional_net_price

Enrollment

Net price is averaged at the sector level within each state. These averages are weighted by full-time undergraduate enrollment to reflect enrollment patterns within the states. Full-time equivalent (FTE) enrollment for undergraduates comes from the IPEDS instructional activity data file. The variable used for the affordability profile analysis is estimated full-time equivalent undergraduate enrollment (variable name fteug), defined by IPEDS as follows:

For institutions with a semester, trimester, or 4-1-4 plan, the number of FTE undergraduates is the sum of undergraduate credit hours divided by 30 and contact hours divided by 900. For institutions with a quarter plan, undergraduate credit hours are divided by 45 and contact hours are divided by 900. For institutions with continuous enrollment over a 12-month period, undergraduate credit hours are divided by 30 and contact hours by 900.

Source: http://nces.ed.gov/ipeds/datacenter/data/EFIA2017_Dict.zip

Income Levels

IPEDS collects net price data for five income levels: families with yearly incomes less than $30,000, from $30,001 to $48,000, from $48,001 to $75,000 from $75,001 to $110,000 and $110,001 and above. The variables used are: NPIS412, NPIS422, NPIS432, NPIS442, NPIS452.

Family Income

Averages are calculated at the state level using data from the American Community Survey. For each state, average family income is calculated, both overall and for each of the income groups as defined by IPEDS ($0-$30,000, $30,001-$48,000, $48,001-$75,000, $75,001-$110,000,
Family income is defined by the Census Bureau in the American Community Survey as follows:

In compiling statistics on family income, the incomes of all members 15 years old and over related to the householder are summed and treated as a single amount. Although the family income statistics cover the past 12 months, the characteristics of individuals and the composition of families refer to the time of interview. Thus the income of the family does not include amounts received by individuals who were members of the family during all or part of the past 12 months if these individuals no longer resided with the family at the time of interview. Similarly, income amounts reported by individuals who did not reside with the family during the past 12 months but who were members of the family at the time of interview are included. However, the composition of most families was the same during the past 12 months as at the time of interview.

Variables used are: FINCP (family income) and WGTP (family weight).

**Institutional Types**

Higher education institutions are grouped into four types, based on SREB institutional categories. Public Four-Year Type 1 institutions include SREB Four-Year 1 and Four-Year 2 institutions, defined as:

Institutions awarding at least 30 doctoral degrees that are distributed among at least five CIP categories (2-digit classification)

Four-Year Type 2 institutions include all other SREB Four-Year institutions.

Public Two-Year institutions include all SREB Two-Year Colleges.

Technical Colleges include all SREB Technical Colleges or Institutes. Data for this sector are reported when more than 3% of FTE attend these institutions.

Source: http://www.sreb.org/criteria-and-definitions

Please note: These calculations exclude service academies, Community College of the Air Force, specialty health care institutions, and tribal institutions.

**Sector Averages**

Sector-level averages are calculated as the simple average across all income levels for that sector. Weighted averages are not used for this calculation because accurate overall information about enrollment patterns by income across institutions is not available.
**Availability**

IPEDS data files were downloaded directly from the IPEDS dataset, with data organization and calculations conducted by the authors. Similarly, the American Community Survey data were downloaded from Census Bureau, with calculations conducted by the authors. Code is available upon request.

**State Grant Funding**

**Need-based grants per student and other grants per student**

**Sources**

Grants: National Association of State Student Grant & Aid Programs, personal communication from NASSGAP staff drawn from 2012 and 2017 annual surveys. The survey includes total state grant dollars for undergraduate students at public higher education institutions. The survey contains five different types of aid: need-based only, need-based and non-need-based (grants that have a need and a non-need component), non-need based only, special purpose grants, and uncategorized grants. This analysis has up to five categories: need-based only, need-based and non-need based, non-need based only, special, and uncategorized financial aid.

**Description**

This indicator measures a state’s commitment to provide aid based on need and aid based on other criteria. The indicator is calculated using the following formula for need-based grants per student (a similar calculation is used for the other two types of grant aid):

\[
\text{Numerator: Total amount of grant dollars for need-based financial aid/other financial aid for public and private undergraduate students in the state}
\]

\[
\text{Denominator: Total number of public undergraduate full-time equivalent students enrolled in the fall}
\]

**Availability**

Data were generously provided by the National Association of State Student Grant and Aid Programs for all SREB states.

**Description**

Creating and preserving low-priced options for college is an important state strategy to ensure access for low-income students and families who would otherwise be priced out of higher education. This indicator measures this aspect of affordability with the following formula:

- **Numerator:** Average cost of lowest-priced sector by state, weighted by FTE enrollment
• **Denominator**: Average family income for families in the lowest income threshold (those making less than $30,000 per year). This is the same data used in the net price calculation described above.

**Institutional Types**

Higher education institutions are grouped into four types, based on SREB institutional categories. Public Four-Year Type 1 institutions include SREB Four-Year 1 and Four-Year 2 institutions, defined as:

Four-Year Type 1 institutions award at least 30 doctoral degrees that are distributed among at least five CIP categories (2-digit classification).

Four-Year Type 2 institutions include all other SREB four-year institutions.

Public Two-Year institutions include all SREB two-year colleges.

Technical Colleges include all SREB technical colleges or institutes. Data for this type are reported when more than 3% of FTE attend these institutions.

Only tuition from the lowest-priced type in the state is included.

**Tuition**

Variable **TUITION1** is used. Tuition is defined as:

- Charges to full-time undergraduate students for the full academic year 2015-16 in-district average tuition.

**IN-DISTRICT TUITION** - The tuition charged by the institution to those students residing in the locality in which they attend school. This may be a lower rate than in-state tuition if offered by the institution.

**TUITION** - Amount charged to students for instructional services. Tuition may be charged per term, per course, or per credit.

**UNDERGRADUATE** - A student enrolled in a 4- or 5-year bachelor's degree program, an associate degree program, or a vocational or technical program below the baccalaureate.

**FULL-TIME UNDERGRADUATE STUDENT** - A student enrolled for 12 or more semester credits, or 12 or more quarter credits, or 24 or more contact hours a week each term.

**ACADEMIC YEAR** - The period of time generally extending from September to June; usually equated to 2 semesters or trimesters, 3 quarters, or the period covered by a 4-1-4 plan.

**Borrowing Among Graduates**

**Sources**

**Borrowing**

College Scorecard data, https://collegescorecard.ed.gov/data/

(Variable=grad_dbt_mdn)

**Enrollment**

IPEDS 12-month instructional activity data files, 2012 and 2017

IPEDS directory files, 2011 and 2016

**Description**

**Borrowing among graduates**

College Scorecard data, “The median debt for students who have completed." Variable used: GRAD_DEBT_MDN.

This is the median loan debt accumulated at the institution by all student borrowers of federal loans who graduate in a given fiscal year. The measure represents the sum of all undergraduate federal loans over students' college education at the institution for which the median debt is reported — e.g., if a student receives a federal loan for $2,000 for each of eight semesters at one institution, cumulative debt is recorded as $16,000 for that institution.

The state profiles use cumulative debt for students who completed only. Students who withdrew without completing are not included.

**Enrollment**

Graduates’ debt is averaged at the sector level within each state. These averages are weighted by full-time undergraduate enrollment in order to reflect enrollment patterns within the states. Full-time equivalent enrollment for undergraduates comes from the IPEDS instructional activity data file. The variable used for the profiles' analysis is estimated full-time equivalent undergraduate enrollment (variable name fteug), defined by IPEDS as follows:

For institutions with a semester, trimester, or 4-1-4 plan, the number of FTE undergraduates is the sum of undergraduate credit hours divided by 30 and contact hours divided by 900. For institutions with a quarter plan, undergraduate credit hours are
divided by 45 and contact hours by 900. For institutions with continuous enrollment over a 12-month period, undergraduate credit hours are divided by 30 and contact hours by 900.
